For 2 to 4 Players
Ages 6 and Up

OBJECT
Be first to move all four of your pawns from your START circle to HOME.

CONTENTS
Gameboard, 16 animal pawns, 2 wooden dice.

SETUP
Each player takes four matching animal pawns. Find the starting path space with the color and animal that matches your pawns. Place your pawns in the START circle. All players do the same. Players should be sitting so that their START circles are to their right. See the Elephant player’s START circle (A) in the gameboard diagram at right.

HOW TO PLAY
All players roll the dice. Highest roller starts. Play then continues to the left.

ENTERING YOUR PAWNS
Each pawn must enter before it can start around the gameboard path. On each of your turns, try to enter your pawns by rolling FIVES, as explained below. To enter each pawn, place it on your ENTER space.
- Pawns are entered only on die rolls of FIVE — a 5 on one or both dice; or any combination totaling 5 (4+1 or 3+2).
- When possible you must enter a pawn. However, if you can’t use a five to enter, try to use it for movement. See MOVING YOUR ENTERED PAWNS.

MOVING YOUR ENTERED PAWNS
Move your entered pawns counterclockwise along the path the number of spaces you roll on the dice; see the arrow on the gameboard diagram.
- You must move whenever possible. If you cannot move by the count of both dice, you may move one pawn by the count of either one of the dice.
- No more than two of your pawns can occupy any space.

The above diagram shows the Elephant player’s START circle (A) and ENTER space (B). The player’s pawns will follow the arrow around the board, up the home path and into the HOME Square.
DOUBLES
A roll of matching dice is called doubles. A roll of doubles entitles you to another roll — and may also entitle you to a bonus move.
• If you roll doubles before all of your pawns are entered, take your turn as usual, then roll again.
• Doubles Bonus: If you roll doubles after all four of your pawns are entered, use the four numbers on the tops and the bottoms of the dice for movement. The total of this four-part move is always 14, and can be taken by one pawn or split among more pawns. For example, if you roll two 6's, use the two 6's on the tops and the two 1's on the bottoms for your four-part move. If you decide to split the move among three pawns, you may decide to move one pawn 6 spaces, a second pawn 1 space, and the third pawn 6 spaces, then 1 space. If you can't take all four parts of your move, don't move your pawns at all. Whether you move or not, roll again.
• Doubles Penalty: The third consecutive time you roll doubles, you may not move forward. Instead, your pawn closest to HOME (even if it's on your home path) must be returned to your START circle and re-entered later. This ends your turn.

CAPTURING AN OPPONENT’S PAWN
• When you land on an opponent’s pawn by the count of any die, you capture it. Return the captured pawn to its START circle where it can be re-entered later. Pawns cannot be captured on their home path spaces, or on most Safety spaces; see SAFETY SPACES for the exception. If you capture a pawn after moving on the count of one die, you may continue your move with the same pawn or with another pawn.
• Capture Bonus: After capturing a pawn, move any one of your pawns an additional 20 spaces at the end of your turn. If you capture during a Doubles Bonus move, complete your capture bonus before moving again. If you can’t move one pawn the full 20 spaces, you forfeit the bonus.

SAFETY SPACES
All spaces with the Lotus flower (including ENTER spaces) are Safety spaces. Two pawns of different colors can never share a Safety space. Pawns cannot be captured on Safety spaces. Exception: If an opponent’s pawn occupies your enter space, when you enter a pawn, you capture it and return it to its start space.

BLOCKADES
Two pawns of the same color on any path space form a blockade. A blockade cannot be landed on, passed or captured by any pawn. If a blockade occupies your enter space, you cannot enter a pawn. You may be forced to break up your own blockade if you can’t move any of your other pawns. The two pawns in a blockade cannot be moved forward to form a blockade together on a new space.

REACHING HOME
• To reach HOME, move your pawns up your home path (the corresponding color path in front of you) and into the HOME square. You may not move your pawns onto any opponent’s home path spaces. Each pawn must enter home by exact die roll, counting the HOME square as a space. For example, the Elephant player’s pawn on space C in the gameboard diagram is 3 spaces away from HOME.
• Home Bonus: After moving a pawn home, move any one of your pawns an additional 10 spaces at the end of your turn. If you can’t move one pawn the full 10 spaces, you forfeit the bonus.

HOW TO WIN
The first player to move all four pawns HOME wins!
