Explore, Settle, Develop, Trade, Consume, or Produce? Which do you need the most? Which of Earth’s former colonies will be most successful at settling the galaxy, now that JumpDrive exists? Who will discover the secrets of the mysteriously vanished Alien Overlords? Your goal: to build the most prosperous and powerful space empire!

In *Race for the Galaxy*, players build galactic civilizations by game cards that represent worlds or technical and social developments.

Each round consists of one or more of five possible phases. In each round, each player secretly and simultaneously chooses one of seven different action cards and then reveals it. Only the selected phases occur. For these phases, every player performs the phase’s action, while the selecting player(s) also get a bonus for that phase.

For example, if at least one player chooses the Develop action, then the Develop phase will occur; otherwise it is skipped. In it, each player may simultaneously select a development from his hand of cards to build. After revealing the cards, each player adds his development to his tableau of cards on the table and then discards cards from his hand equal to its cost. Each player who chose Develop discards one card fewer as his bonus.

Explore allows a player to draw cards and select which of them to add to his hand. Settle allows a player to place a world in his tableau. Some worlds produce goods, represented by face down cards, when Produce is selected. These goods can be discarded for victory points or sold to add cards to the player’s hand by selecting Consume. With cards, players can settle new worlds and build more developments, gaining both victory points and card powers that provide advantages in certain phases.

The player who best manages his cards, phase and bonus selections, and card powers to build the greatest space empire, wins.

The winner is the player with the most victory points.

**OVERVIEW**

**CONTENTS**

Some cards in the three decks have been presorted for your very first game (see Setup). Unpack the card decks carefully.

- 5 start world cards (numbered “0” to “4” in red or blue squares in their upper left and lower right corners)
- 109 game cards (like start worlds, these have the title on back)
  - 53 worlds (with symbols)
  - 50 developments (with symbols)
- 4 sets of 7 player action cards (used to select phases and bonuses each round; these have no title on their brightly colored backs)
- 8 duplicate action cards for experienced 2-player games (marked)
- 4 summary sheets
- 28 Victory Point (VP) chips: 18 @ 1, 6 @ 5, and 4 @ 10

Carefully remove the VP chips from their frame before your first game.
SETUP

Place 12 victory point (VP) chips per player in 1 and 5 VP chips nearby. Set aside the 10 VP chips (and any left over chips) for use only during the final round of play.

Each player takes a set of seven different action cards.

Find and shuffle the five start worlds. Deal one world face up to each player. These form each player’s initial card tableau.

Your first game: instead, for two players, use start worlds 1 and 2; for three, use start worlds 1-3; and, for four, use start worlds 1-4.

Shuffle the unused start worlds together with the game cards. Deal six face down cards to each player. Each player then examines these cards and discards two cards face down to the discard pile. The remaining game cards form the initial card supply.

Your first game: instead, each player uses the four numbered game cards matching his start world’s number as his initial (preset) hand. After finding these preset hand cards, shuffle all the remaining game cards, including any left over start worlds and preset hand cards, together.

The start worlds, preset hands, and action card sets for your very first game have already been presorted by the printer.

If Alpha Centauri is in play, place a card from the card supply face down on top of it (as its starting Windfall good).

Cards in the card supply and the discard pile are both face down. To tell them apart, keep the card supply neat and the discard pile a bit “messy”.

Use 12 VPs per player.

A player’s developments and worlds are placed in a card tableau.

Each player’s card tableau is in front of him. It is one or more rows of face up cards: developments and worlds. Initially, it contains only the player’s start world.
A game is played over several rounds (typically 7 to 11). At the start of a round, each player simultaneously and secretly chooses one action card, placing it face down in front of himself. Once all players have done so, they turn these action cards face up. Then, the players perform the selected phases in order (I: Explore; II: Develop; III: Settle; IV: Consume; V: Produce), omitting every phase not chosen by at least one player.

Each phase has an action, which is performed by all players. In addition, the players who chose that phase get a bonus.

**Important:** if more than one player chooses the same phase, its action is still only performed once (with all the players who selected that phase receiving a bonus).

The bonus for an action either modifies it (such as reducing its cost or doubling the VP gained) or is in addition to it (such as a card draw afterwards or the opportunity to sell a good).

Players may find it useful to turn over the action card(s) for each phase as it is completed before performing the next one.

New players may find it useful to place the selected action cards in the center in numerical order. As players become more familiar with the phase order, this won’t be necessary.

After all phases chosen that round have been performed, each player must discard down to ten (game) cards in his hand and then reclaims the action card that he or she played that round.

Successive rounds are performed in the same manner until an end-of-game condition is met (see **Game End** below).

Game cards have three uses: as a development or world to be placed in a player’s tableau; as one wealth to discard from one’s hand face down when paying to place a development or world; or as a good placed face down on a world either upon it being settled or during production.

**I: EXPLORE**

Action: each player draws two cards and then simultaneously selects which one of them to add to his hand, discarding the other card face down in the center discard area.

All cards drawn are dealt out before any cards are discarded.

There are two possible Explore bonuses, depending on which Explore action card was chosen by a player.

A player who chose Explore: +5 draws five more cards to select from before making his choice. Such a player explores by drawing 7 cards and choosing 1 of them to add to his hand.

A player who chose Explore: +1,+1 draws one more card to select from and keeps another card. Such a player explores by drawing 3 cards and choosing 2 of them to add to his hand.

Thus, depending on the bonus chosen with the Explore action, a player can either have more cards to select from or gain an extra card to keep.

The powers of various cards can alter these rules if a player has them in his tableau, possibly providing extra card draws or allowing a player to keep additional cards.

Each round, all players secretly choose and then reveal an action card.

Only phases selected by players are performed.

Perform the selected phases in numerical order:

I: Explore
II: Develop
III: Settle
IV: Consume
V: Produce

A phase has an action, performed by all players, and a bonus, performed only by the players who chose that action card.

At the end of a round, players must discard down to a hand limit of 10 cards.

Game cards have three uses, as:
- developments or worlds
- one wealth (money) to spend
- one good (on a world)

Action: draw 2 cards; keep 1, discard the other.

All explore draws are done before any player discards.

Bonus (based on the action card chosen): draw 5 more cards or draw 1 more card and keep 1 more card.

**Example:** with this Explore power, a player (with no bonus) would draw four cards and keep two of them.
II: DEVELOP

Action: each player places a development card from his hand face down, or no card if a player doesn’t intend to place a development. Once all players have done so, they simultaneously turn them face up and then pay for them.

If desired, players can put their intended developments (if any) under their action card, revealing them when everyone is ready.

Each development has a symbol containing its cost, ranging from 1–6. To pay for a development, a player discards cards equal to this number face down from his hand.

Players who chose Develop, as the bonus, discard one card fewer than the development’s cost. If, due to special powers, a player is already discarding no cards, no bonus is received.

A player may not build a given development if another copy of it is currently in his tableau.

Next to a development’s diamond is its victory point (VP) value. It adds to the player’s final victory point total at the end of the game.

6-cost developments have listed as their victory point values. These are worth a variable number of victory points at the end of the game, as indicated on these cards.

The powers of various cards can alter these rules if a player has them in his tableau before the development phase begins.

CARD POWERS

Every development, and most worlds, list one or more powers. Standard powers are depicted by icons with no text description (see the reference sheet). Special powers have icons, highlighted phases, and text descriptions at the bottom of the card which begin with the corresponding phase number.

All powers modify rules and are cumulative. A power modifies only the rules listed in its description; all other rules still apply.

“Draw” — in all phases except Explore — means draw a card and add it to your hand. In Explore, it means draw a card and add it to the cards you then select from, as in the Explore rules.

If, due to powers, a cost is reduced below 0, it becomes 0. A player does not receive cards as a “refund” if this occurs.

A power does not take effect in the phase in which its card is placed; it can begin to take effect as soon as the next phase.

Thus, the Public Works power to draw one card after its owner builds a development does not apply to Public Works itself.

Unless a power’s description uses the word “may”, a power must be used, if possible, in the phase to which it applies (though a player may freely choose the order in which to invoke powers, as discussed further under Consume).

An optional power (such as a Colony Ship) must be used if it is needed to place a development or world which a player has selected and then revealed.

Powers are resolved sequentially (even though their effects can be cumulative). A player cannot “interrupt” one power with another.

Developments, and most worlds, grant powers.

Power icons appear on the left side of cards, arranged in I to V phase order, allowing players to easily scan their tableaus for them during a phase.

The chromosome icon UPLIFT, IMPERIUM, and TERRAFORMING are for use in future expansion sets.

Powers first take effect in the phase after their card is placed.

Powers must be applied if possible, unless the card text indicates otherwise.
III: SETTLE

Action: each player places a world card from his hand face down, or no card if a player doesn’t intend to place a world. Once all players have done so, they *simultaneously* turn them face up and then pay for (or conquer) them.

Many worlds contain a black number, ranging from 0-6, in a black circle; this is the world’s *cost*. To pay for such worlds, the player discards cards face down from his hand equal to this number.

Players who chose *Settle*, as the bonus, draw one card after placing and paying for (or conquering) a world.

Beside a world’s circle is its victory point value. This adds to the player’s final victory point total at the end of the game.

The *powers* of various cards can alter the settle rules if a player has them in his tableau before the settle phase begins.

**Windfalls:** some worlds have a colored “halo” around their circle, showing that they are *windfall worlds* and that a good is to be put on them when they are first settled. To do so, as part of placing the world in a player’s tableau, he takes a card face down — without looking at it — from the card supply and puts it on top of the world’s lower right portion (to avoid hiding the world’s VPs and powers). This card represents a *good* of the *kind* indicated by the color of the world’s halo.

There are four *kinds* of goods in the game:

- **Alien technology**, artifacts left by the vanished Alien Overlords.
- **Genes**, genetic material used in biological research.
- **Rare elements**, transuranic elements powering JumpDrive.
- **Novelty goods**, such as artwork and entertainment.

**Military Conquest:** some worlds have red circles and, within them, a red outlined number, ranging from 1–7; this is the world’s *defense*. These worlds *cannot* be placed by payment, but instead must be *conquered*. To conquer a world, a player’s total *Military* must equal or exceed the world’s defense. Then, the player simply places it — and its windfall good, if it has a halo — without paying for it (and then draws a bonus card if that player chose *Settle*).

Military is granted by powers of various start worlds, developments, or worlds, and lasts until the end of the settle phase.

Some developments and worlds, such as the *Empath World*, *subtract* from a player’s total Military.

**New Military Tactics** may be discarded from a player’s tableau for +3 Military until the end of that settle phase.

A *Contact Specialist* enables a player to place and pay for a military world (except an *Alien* military world), at a cost equal to one less than the world’s defense.

**Important:** this cost is *not* reduced by a player’s Military (Military and payments *never* combine).

Cost discounts from *Replicant Robots*, *Mining Robots*, etc. *do* combine with a *Contact Specialist* to reduce the cost of placing a military world. Similarly, a *Colony Ship* allows a *Contact Specialist* to place a (*non-Alien*) military world at no cost.

Thus, there are two *completely separate* ways to place military worlds.

**Action:** place and pay for a world, receiving any windfall as indicated.

**3**

**Cost**

**2**

windfall world

production world

**Bonus:** draw a card *after* placing a world.

**5**

VPs

Worlds are worth victory points.

A windfall is received *once*, when a world is first placed.

Windfall goods are placed on top of worlds with colored halos around their costs.

Military worlds (with red circles) must be conquered to be placed.

**To conquer a military world, the player’s Military must equal or exceed its defense.** He then places the world for no cost.

**+2**

**-1**

*sample military powers*

A *Contact Specialist* allows a player to place a military world by paying for it, *instead* of conquering it.
**IV: CONSUME**

Action: all players **must** use their consume powers to discard goods for victory point **chips** and/or card draws.

Some powers consume several goods. Others consume goods of a specific **kind**. Some, such as **Deficit Spending**, consume **cards**, not goods, discarded from a player’s hand. A few powers, such as **New Economy**, don’t involve discarding anything; they simply take effect during a **Consume** phase.

Goods are discarded face down (without examining them). Each good being discarded applies to only one consume power. A good may or may not be on the world consuming it.

Consumption is mandatory. However, consume powers can be invoked in **any** desired order, even if this results in some unconsumed goods left over that could have been consumed with a different order (due to their **kinds** not matching the player’s remaining unused consume powers).

Each consume power can be used only once in a consume phase. Some powers allow multiple goods, “up to” some number, to be discarded, with each good producing an effect. Such powers must be fully used, if possible, when invoked.

Thus, a player with a tableau containing three novelty goods, **New Vinland**, and **Free Trade Association**, cannot consume two goods using FTA’s power (to consume up to 3 novelty goods for 1 VP and a card apiece) and then, based on the cards received, decide to consume the third novelty good using **New Vinland**’s power (to consume a good for two cards). The third novelty good must now be consumed by FTA.

(These powers could have been invoked in the reverse order, but this choice must be made **before** invoking FTA’s power — once a power is invoked, its resolution cannot be interrupted by another power.)

There are two possible **Consume** bonuses, depending on which **Consume** action card was chosen by a player.

**$: Trade**: players who chose **Consume: Trade** must sell one good (before applying their consume powers), by discarding it and drawing a number of cards that depends on the **kind** of good sold: **Alien** technology: 5 cards; **Genes**: 4 cards; **Rare** elements: 3 cards; or **Novelty**: 2 cards.

**Only** players who chose **Consume: Trade** can sell a good.

Players choosing **Consume: Trade** also apply all relevant **Trade** special powers (listed next to $) to this sale (typically, to draw extra cards).

Players who chose **Consume: 2x VPs** double the number of victory point chips — but not any other effects — that their consume powers provide.

Exception: VPs for discarding cards from your hand (from powers such as **Deficit Spending** or **Merchant World**) are not doubled by this bonus.

---

**Action: use consume powers if possible, typically to discard goods for victory point chips.**

---

**Sample consume powers**

**Rare elements consumption (2 goods for 3 VPs)**

**Deficit Spending**

**Free Trade Association**

**New Vinland**

---

**Consumption powers must be used fully, if possible, but may be used in any order.**

---

**Bonus (based on the action card chosen): sell 1 good first or receive double VP chips.**

---

**Important: Trade is not a separate phase; it occurs before a Consume phase for only those who chose it.**

---

**Sample trade powers**
Action: place a good on each production world (worlds with colored, solid circles) without a good, by taking a card face down — without looking at it — from the card supply and putting it on top of the world’s lower right portion (to avoid hiding the world’s VPs and powers). This good is of the kind indicated by the color of the world’s solid circle.

No world can have more than one good. Place a good on the lower right portion of a world to avoid hiding the world’s VPs or powers. Some worlds, such as Gem World, provide a card draw as part of producing a good. If a good is already present, then no cards are drawn.

Players who chose Produce, as the bonus, produce a good (if possible) on one of their windfall worlds that does not already have a good.

Some cards, such as Genetics Lab, can also produce goods on windfall worlds (without goods).

Others, such as the Pan-Galactic League, provide a card draw for each world of a specific kind in a player’s tableau (such as Genes worlds, with either a green halo or a green solid circle).

Action: place a good on each world without a good that produces one.

Place produced goods on production worlds (with colored, solid circles).

Bonus: produce a windfall.

Icons for produce powers that provide cards or windfalls are listed twice, once in the icon bar and once on the top, right corner of each card, as an aid when dealing out production.

Discard down to 10 cards at the end of each round.

The game ends after:
• a player ends a round with 12 or more cards in tableau, or (A player can end with more than 12 cards in his card tableau by placing both a development and a world in the final round.)
• the last victory point chip is given out.

If victory point chips run out, add the 10 VP chips and make change so that all victory points earned in the final consume phase can be taken.

Total each player’s development and world VPs, VP chips, and any end of game VPs for 6-cost developments.

The player with the highest total is the winner!

If two or more players tie, the player among them with the highest total number of cards in hand (after discarding) and goods on worlds wins.

If there is still a tie, then all the tied players win.

After a game, separate the start worlds by fanning the deck, looking for boxed numbers in the right-hand corners.
Mostly, play can and should be performed simultaneously.

However, there are a few cases where player order can matter, such as:

- when there are only a few cards left in the card supply, or
- when the VP chips might run out in a Consume phase, or
- when players are settling near the end of the game.

Near the end of the game, if several players have New Military Tactics or Colony Ships, a player may wish to know whether another player is using (and discarding) one of these cards or placing a twelfth card in his tableau (thus ending the game that round), before deciding whether to use one of these cards himself.

In this and similar cases, perform the phase in clockwise order, starting with the player who has the lowest numbered (original) start world.

2 PLAYER GAME (for experienced players)

Initially, two players should just play the standard rules. Once you’re familiar with the game, play with the following changes:

- Each player uses a full set of nine action cards and chooses two of them at the start of each round.
- A player selecting both Explore bonuses draws eight cards and keeps two of them (plus the effects of any applicable powers).
- If a player chooses either two Develop or two Settle actions, then two complete, sequential phases of that type occur (with this player receiving a bonus in each of them). If his opponent also chose one of these same actions, then his opponent receives a bonus only for the first of these two phases. Powers placed in the first such phase can be used in the second one.
- A player who selects both Consume bonuses must sell one good before consuming other goods for double VPs.

$: TRADE

**Any Good**

Draw 1 or 2 more cards when selling a good.

**Specific Kind of Good**

Draw 1, 2, or 3 more cards when selling a good of the indicated *kind*.

**This World’s Good**

Draw 1 or 3 more cards when selling a good from the world with *this* power (plus any other applicable *Trade* powers, possibly due to its *kind*).

---

**IV: CONSUME**

**Any One Good**

Discard 1 good (of any kind) to gain the specified VP chips and/or cards.

**Fixed Number of Goods**

Discard 2 goods (of any kind, possibly the same) to gain 3 VP chips.

**Specific Kind of Good(s)**

Discard exactly 3 goods, each of a *different kind* to gain 3 VP chips.

**All Goods**

Discard all goods (possibly after using other consume powers) to gain VP chips equal to one less than the number of goods discarded.

*Example:* if the player has 3 goods when this power is invoked, he discards all of them for 2 VPs.

**Discarding “up to”**

Discard goods up to the indicated number to gain the specified VP chips and/or cards for each good discarded.

*Example:* with two remaining goods (of the appropriate kind), the player must discard both of them after invoking one of these powers.

**For Cards at *Trade* Prices**

**Black Market Trading World**

Discard 1 good to gain cards equal to its *Trade* price.

*Novelty:* 2; *Rare elements:* 3; *Genes:* 4; *Alien:* 5.

*Trade Powers do not affect this power.*

**Trade League**

Discard 1 good to gain cards equal to its *Trade* price.

*Novelty:* 2; *Rare elements:* 3; *Genes:* 4; *Alien:* 5;

*plus* all applicable *Trade* powers (including its own *Trade* power).

---

**Draw**

Draw 1 card.

**Draw if Lucky**

Name a number from 1–7. Turn the top card from the card supply face up. If its cost or defense matches the number, keep it. Otherwise, discard it.

*The Gambling World also has a standard consume power in addition to this one.*

**Discard Cards, not Goods**

The player may discard up to 2 cards from his hand to gain 1 VP apiece.

*These VPs are not doubled by the Consume: 2x bonus.*
**V: PRODUCE**

<table>
<thead>
<tr>
<th>Produce Good</th>
<th>Produce Windfall Good</th>
<th>Produce Specific Windfall</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="produce_good.png" alt="Image" /></td>
<td><img src="produce_windfall_good.png" alt="Image" /></td>
<td><img src="produce_specific_windfall.png" alt="Image" /></td>
</tr>
<tr>
<td>Produce a good on this world (if it does not have a good on it).</td>
<td>The player produces a good on one of his windfall worlds ( ) without a good on it.</td>
<td>The player produces a good on one of his windfall worlds of the specified kind ( ) without a good on it.</td>
</tr>
</tbody>
</table>

**Draw**

- Draw 1 or 2 cards.

**Draw for Kind**

- Draw 1 card for each good of the specified kind ( ) that the player produced during this Produce phase.

**Draw for Worlds**

- Draw 1 card for each Genes production or windfall world ( ) in the player's tableau.

**Draw for Most of a Kind**

- At the end of Produce, draw 2 cards if the player produced more Rare elements goods ( ) during this phase than any other player.

**Draw for Different Kinds**

- Draw 1 card for each different kind of good ( ) that the player produced this Produce phase.

---

**ABOUT THE CARDS**

**Distribution (114 game cards):**
- 5 start worlds: 4 and 1
- 22 other military worlds
- 37 other non-military worlds
- 12 6-cost developments
- 38 other developments: 19x2

23 worlds are military worlds:
- 6 defense 1 (1 Rebel)
- 7 defense 2 (1 Alien, 1 Rebel, 1 start)
- 3 defense 3 (2 Rebel)
- 2 defense 4 (1 Alien)
- 2 defense 5 (1 Alien, 1 Rebel)
- 2 defense 6 (1 Alien, 1 Rebel)
- 1 defense 7 (1 Rebel)

Contact Specialist not allowed for 4 Alien

19 cards provide Military:
- 7 2x+1, 3x+2, 2x+3
- 2 provide +3 upon discard
- 6 4x+1, 1x+2, 1x+3
- 2 +1
- 2 start worlds: +1; +2

Galactic Empire: +4 vs 7 Rebel
1 and 1 are +2 vs 4 Alien
Alpha Centauri: +1 vs. 3 Rare
5 cards have -1 Military

91 cards are placed by payment:
- 2 cost 0: 0 and 2
- 18 cost 1: 12 and 6
- 23 cost 2: 12 and 11
- 14 cost 3: 4 and 10
- 13 cost 4: 8 and 5
- 7 cost 5: 2 and 5
- 14 cost 6: 12 and 2

25 worlds are windfall worlds:
- 5 Novelty: 2 and 3
- 7 Rare: 5 (1 start) and 2
- 7 Genes: 2 and 5
- 6 Alien: 3 and 3

21 worlds produce a good:
- 9 Novelty: 6 (1 start) and 1
- 6 Rare: 5 and 1
- 4 Genes: 3 and 1
- 2 Alien: 1 and 1
- 6 and 2 produce a good at a specific kind of windfall world;

1 produces one at any world.

33 cards consume one or more goods:
- 13 (3 start) and 2
- 15
- 2 and 1 consume cards for VPs.
### 6-COST DEVELOPMENTS

For these developments, score end of the game VP's for every card in its owner's tableau that satisfies one of the conditions listed on that development (and for every 3 VP's in chips its owner has in the case of **Galactic Renaissance**).

#### ALIEN TECH INSTITUTE

- 3/ Alien technology production world
- 2/ Alien technology windfall world
- 2/ Other 6-cost card (including this one)

#### FREE TRADE ASSOCIATION

- 2/ Novely production world
- 1/ Novely windfall world
- 2/ Consumer Markets
- EXPANDING COLONY

#### GALACTIC FEDERATION

- 2/ 6-cost developments (including this one)
- 1/ Other developments

#### GALACTIC IMPERIUM

- 2/ Rebel military world
- 1/ Other military world

Rebel military worlds have a red, shaded circle beneath their VP's.

#### GALACTIC RENAISSANCE

- 1/ Every three VP chips (rounded down)
- 3/ Research Labs, Galactic Trendsetters, Artist Colony

#### GALACTIC SURVEY/SETI

- 1/ Development with an Explore power (including this one)
- 1/ Other world

#### MERCHANT GUILD

- 2/ Production world (not windfall)

#### MINING LEAGUE

- 2/ Rare elements production world
- 1/ Rare elements windfall world
- 2/ Mining Robots, Mining Conglomerate

#### NEW ECONOMY

- 2/ Development with a Consume power (including this one)
- 1/ Other world

*Trade powers are not considered Consume powers for these VP conditions*

#### NEW GALACTIC ORDER

- Total Military (count negative Military but do not count specialized Military)

Specialized Military includes not only bonuses against Rebel and Alien military worlds, etc. but also temporary Military, such as provided by New Military Tactics.

#### PAN-GALACTIC LEAGUE

- 2/ Genes world
- 1/ Other military world
- 3/ Contact Specialist

#### TRADE LEAGUE

- 2/ Development with a Trade power (including this one)
- 1/ Other world
