SHADOWS OF BRIMSTONE

RULEBOOK

An Old West Horror Board Game for 1-4 Players, Ages 12 and Up

FLYING FROG PRODUCTIONS
It is the mid-1880s in the Southwest United States, and the small mining town of Brimstone has found Dark Stone up in the hills; a new precious mineral with magical properties, rarer than gold... and more dangerous! Digging for it greedily, prospectors came from all around, not knowing the consequences of their actions until it was too late! In a flash, the town of Brimstone was consumed, the epicenter of a cataclysmic magical explosion, ripping open portals to other worlds down in the mines and unleashing a great Darkness to spread across the land!

Now hordes of demons pour from the mines to ravage the countryside, and the sky grows black with swarms of nightmarish creatures descending on unwary travelers in the night! While most flee in terror, some heroic individuals come forward to help hold back the Darkness, fighting their way into the mines to seal these gateways, and maybe find a fortune of their own along the way!

**Game Overview**

*Shadows of Brimstone™* is a fast-paced, Cooperative, dungeon-crawl boardgame set in the Old West, and mixed with Unspeakable Horror! Each player creates a character, taking on the role of a classic Western Hero Archetype, such as a Lawman, Bandit, Rancher, or Saloon Girl. Forming a posse of Heroes, the players take their characters down into the mines in the foothills surrounding the demonically overrun town of Brimstone. The Heroes can embark on a variety of different missions, from finding and sealing a gateway to another world, to rescuing a farmer’s son who was hauled off in the night by a horrible creature. The Heroes explore a dynamically generated mine, overcoming dangerous encounters and fighting savage creatures, while collecting up useful Gear and ancient Artifacts to help them during their adventures. Heroes can even find portals to other worlds, stepping through to continue their adventure on the other side.

Hero characters can be kept from game to game in a campaign system, earning experience and going up in levels to increase their skills and gain new abilities. The Heroes can also visit local Frontier Towns between adventures, spending their hard-earned loot and re-supplying for the next mission.

So load up yer’ six shooter, throw on yer’ hat and poncho, and gather the posse, the Darkness is coming, and all hell’s about to break loose... in the *Shadows of Brimstone*!

**Players**

*Shadows of Brimstone™* is a fully cooperative game for 1-4 players. If combining this Core Set with another Core Set, this can be increased to 5-6 players. All of the players work together against the game itself and the difficulty is scaled based on the number of Heroes taking part in an adventure.

---

**Dice**

The game comes with 16 standard six-sided dice (8 White and 8 Red) that should be divided amongst the players. There are two colors of dice included with the intent that the Red dice can be used for Enemy attacks and the White dice for the Heroes’ rolls. Often cards will refer to the terms D6 and D3. D6 is just another name for a six-sided die. D3 means to roll a six-sided die and consult the following chart:

<table>
<thead>
<tr>
<th>D6 Roll</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 – 2</td>
<td>1</td>
</tr>
<tr>
<td>3 – 4</td>
<td>2</td>
</tr>
<tr>
<td>5 – 6</td>
<td>3</td>
</tr>
</tbody>
</table>

**Re-rolls**

There are many things in the game that let you Re-roll one or more dice. It is important to note though that:

You may not Re-roll the same die more than once.
8-Sided Die
The game also comes with an 8-sided die which is used for some special rolls. This die is often referred to as a D8.

The Peril Die
There is also a larger, special six-sided die included called the Peril Die. This die is marked with the numbers 3, 4, 4, 5, 6. It is most often used for determining the quantity of Enemies during an attack, and is represented on cards as a "[dice]

Wound Markers
These red Wound Markers are placed on Heroes and Enemies to keep track of how much damage they have taken during the game. There are individual Wound Markers as well as larger markers representing 5 Wounds each.

Sanity Damage Markers
These blue Sanity Damage Markers are placed on Heroes to keep track of how much Sanity Damage they have taken during the game. There are individual Sanity Damage Markers as well as larger markers representing 5 Sanity Damage each.

Dark Stone
These markers are used to keep track of Dark Stone shards that Heroes find on their adventures.

Grit
Grit is a resource that Heroes have that can be used for Re-rolling dice, activating special abilities, or adding a burst of speed to your movement.

Exploration Tokens
These markers are placed face down in new rooms discovered as the Heroes explore and, when revealed, tell the number of exits a room has as well as if there are any Encounters or Enemies to be overcome there. Some also have a "[cheese]

Side Bag Tokens
Each Hero has a Side Bag that can carry helpful Tokens for them such as Bandages, Whiskey, or Dynamite.

Scavenged Markers
These markers are used to show when a Map Tile has been successfully Scavenged by the Heroes for anything of value. Each Map Tile may only be Scavenged once.

Revive Tokens
These tokens are occasionally used to give Heroes an extra chance at survival, allowing a Hero that was just KO’d to get back up without long-lasting effects.

Depth Track
The Depth Track is used to show how far into the mine the Heroes have ventured as well as showing the progression of the Darkness as it grows in power and gets closer to escaping the mine, causing defeat for the Heroes.

Darkness Marker
This marks the current position of the Darkness on the Depth Track and moves up the track over the course of the game, as the Darkness tries to escape the mines!

Hero Posse Marker
This marks the current position of the Heroes on the Depth Track and moves down the track as the Heroes explore the mine.

Additional Counters
Several additional counters have been provided. These are not needed for the main game but can be used for house rules or future official content.

XP and Gold
XP and Gold are only needed when keeping Heroes from one Adventure to the next, and are gathered in large quantities, so no counters are included for them. Instead, it is recommended that players track their XP and Gold by keeping a running total of each on a piece of paper.

Figures and Bases
Each Shadows of Brimstone Core Set comes with a variety of miniatures to represent the Heroes and Enemies for the game, as well as plastic bases to mount them on. A full listing of the figures, which size base they should be on, and how to assemble them can be found in the Adventure Book.

Shadows of Brimstone CD Soundtrack
Shadows of Brimstone™ comes with its own CD Soundtrack of original music to listen to while you play the game. It does not affect gameplay, but enhances the experience by setting the mood and immersing the players in the game.
There are many different decks of cards in the game that are used for everything from dynamically generating the mine as you explore it, to the Enemies you encounter, to the cool Gear and Artifacts you find along the way.

**Keywords**
Most cards have Keywords associated with them, listed just below the title of the card. The Keywords usually do not have any inherent meaning, but are occasionally referenced by other cards and rules.

**Icons**
Many cards contain icons that represent various aspects of the card. A full list of these icons can be found on the Reference Summary at the back of this Rulebook.

**Remains in Play**
Some cards are listed as Remains in Play. As it sounds, these cards stay in play and continue to affect the game until they are canceled in some way.

**Discard Piles**
For each deck of cards in the game there will also be a discard pile. The discard pile should be formed face up next to the deck and is where cards from that deck go when they have been used and are no longer in play. Any player may look through any discard pile at any time. If any deck ever runs out of cards, shuffle the discard pile thoroughly and reform the deck face down.

Some of the card decks (such as Loot and Scavenge cards) do not have discard piles, but rather are fully shuffled every time one or more cards need to be drawn.

---

**CARD TYPES**

**Gear and Artifacts**
Gear and Artifact cards are special equipment and relics that the Heroes can find while exploring the mines. They represent everything from common items like rope or bandages to ancient alien artifacts and occult books of lore! When found, these cards stay with the Hero and give them the bonuses listed on the card.

**Starting Gear and Personal Items**
Every Hero Class starts with specific Starting Gear cards listed on their Hero Character Sheet. They also draw a single Personal Item to give them an extra bonus and help define their personality and backstory a bit more.

**Hero Starting Upgrades**
Each Hero Class also has a set of three unique Starting Upgrades that they get to choose from. This helps players to start customizing their Hero character right from the beginning.

**Map Cards**
The Map Deck is used to randomly generate the Mine as the Heroes explore. This allows every Mine layout to be different. There is one Map card to represent each Map Tile in the game.

**Darkness Cards**
Powerful bonuses for the Darkness, these cards cause surprise Attacks and boost the power level of the Enemies over the course of the game. Many Darkness cards are marked as Remains in Play, staying on the table and having a long-lasting effect.

**Encounters**
These cards represent all manner of situations that the Heroes can find themselves in while exploring the mines. They include everything from underground lakes or waterfalls to having a run-in with an old prospector or ghostly apparition.

**Threat Cards**
When the Heroes are attacked, drawing a Threat card tells you what types of Enemies and how many are involved. There are 3 different Threat Decks that are scaled for the number of Heroes playing, as well as Epic Threats for major Fights.

**Loot**
Loot cards are used to generate the rewards that Heroes get for winning a Fight or overcoming certain Encounters. Unlike most decks, the Loot Deck has no discard pile and is fully shuffled before each draw.

**Growing Dread**
These cards are a representation of the unspeakable horrors that await the Heroes as the Darkness grows in power. They are usually collected over the course of the game, but not revealed until the final Fight.

**World Cards**
These cards are used as reference for the global effects of the world the Heroes are currently in as well as to draw a random World when the Heroes find a Gate.
Scavenge
Scavenge cards are used to determine what a Hero finds when they Scavenge a Map Tile for anything useful. Much like the Loot Deck, the Scavenge Deck has no discard pile and is fully shuffled before each draw.

Other World Specific Decks
Each Core Set also contains all of the cards needed for the unique Other World included in the set. There are Other World specific decks for Artifacts, Encounters, Map Cards, and Threats only found while exploring that alien environment.

Reference Charts
These large Charts show the information for Frontier Towns you can travel to between adventures, including the various Town Locations you can visit, as well as an overhead Town Map, and charts for Depth Events, Injuries, and Madness.

LARGE CARDS
In addition to the regular-sized card decks, there are several large Charts and Record Sheets, displaying the Hero Classes players can choose from, Enemies that you will face, and various charts for use on your adventures and while visiting Frontier Towns between missions.

Hero Character Sheets
There are four large Hero Character Sheets, each detailing the stats and abilities of a Hero Class that a player can choose to play. These Character Sheets have a Male portrait on one side and a Female portrait on the other, so players can choose the gender of their Hero.

Enemy Record Sheets
There are also several double-sided Enemy Record Sheets showing the stats and abilities of the various Enemies that the Heroes might run into on their Adventures. These Record Sheets have the normal version of the Enemy on one side (green) and the higher level, Brutal version of that Enemy on the back (red).

MAP TILES
The game board is made up of a collection of Map Tiles that hook together with puzzle style connections. There are two main types of Map Tiles, Rooms and Passages (corridors that connect the Rooms). There are also small End Cap pieces for blocking off Room exits that are not Doors and Gate End Caps for when the Heroes find a portal to another world! End Caps and Gates are not considered full Map Tiles, they simply cap off the Map Tile they are attached to.

All Map Tiles are double-sided and have the Mines on one side and an Other World on the other side.

A Grid of squares is printed on the Map Tiles and this is used for the placement and moving of models during gameplay. Note that at every puzzle connection on a Map Tile, there are two half spaces. When another Map Tile (or End Cap) is connected, this adds the other half of the two spaces, creating complete grid spaces, with half on each of the two Map Tiles.

For game purposes, a model that occupies one of these half-and-half grid spaces on a puzzle connection counts as being on BOTH Map Tiles.
A) Hero Class
   A character's Hero Class is the classic Old West archetype that the character falls into and is the main thematic defining factor for their Skills and Abilities.

B) Keywords
   A Hero's Keywords are traits of that character. They do not have any inherent meaning, but rather are referenced by other cards and Abilities (often as restrictions for the use of certain Items).

C) ‘To Hit’ Values
   What the Hero needs to roll on their dice to hit Enemies when making an Attack. There are two different To Hit values, one for Ranged Attacks and one for Melee Attacks.

D) Combat
   This is the base number of dice that the Hero gets to roll when making a Melee Attack, even if they have no hand-to-hand weapons (they can always throw a punch).

E) Max Grit
   This is the maximum amount of Grit that the Hero can have at one time.

F) Skill Attributes
   There are 6 different Skills that every Hero has, Agility, Cunning, Spirit, Strength, Lore, and Luck. These Skills are used for making tests during the game.

G) Initiative
   Initiative determines how quick a character is and how early in the turn they get to Activate. Each turn models are Activated in Initiative order, from highest to lowest.

H) Abilities
   Every Hero Class has one or more special Abilities that are an important part of being that Hero Class. These Abilities are not always beneficial, but fundamentally effect how the Hero plays.

I) Starting Items
   Gear that any character of that Hero Class always starts their adventuring career with.

J) Health
   A representation of the Hero’s physical well being. Health is reduced by taking Wounds. If your Health is ever reduced to 0, you are KO’d.
K) Defense
Any time the Hero takes one or more Hits, they may use their Defense as a saving roll against each Hit to prevent taking Wounds.

L) Sanity
Sanity is just like Health, but for the Hero’s mental well-being. Sanity is reduced by taking Sanity Damage. Just like Health, if your Sanity ever reaches 0, you are KO’d.

M) Willpower
Just like Defense is to Health, Willpower is a saving roll for Sanity to prevent taking Sanity Damage or Corruption.

---

**CREATING A NEW HERO**

Creating a new Hero is fast and easy. It is often just as fun to start a fresh new Hero as it is to keep one Hero from game to game, over a series of Adventures. To create a new Hero, just follow these simple steps:

Choose Hero Class
The most important choice for a new Hero is what Hero Class you want to play. Each Hero Class has its own unique stats and Abilities, and a fairly different play style. Choose which Hero Class your new Hero will be. If you are new to the game, each different Hero Class in this Core Set is described in detail in the Adventure Book.

Get Starting Items
Every Hero Class has a small list of Starting Items printed on their Character Sheet that they get for free. Find these items for your Hero amongst the Starting Gear cards. It is important to note that, in many ways, the Starting Gear of a Hero is just as important a factor as their Abilities and stats.

Draw a Personal Item
Every Hero starts their adventuring career with one Personal Item that not only gives them a powerful bonus, but can help to define the backstory of that Hero. Draw one Personal Item card for your Hero.

Choose Your Starting Upgrade
When creating a brand new Hero you get to choose one of the three Hero Starting Upgrades available to your Hero Class. This is one of three unique abilities that helps to define your Hero right from the beginning. Choose wisely though as the two Upgrades you don’t pick will not be available later.

Get a Side Bag and Free Token
Take a Side Bag card for your Hero. Every Hero has a Side Bag that can hold up to 5 Tokens in it. A New Hero also gets to choose one Token to start with for free. Choose from Whiskey, Bandages, or Dynamite.

Name Your Hero
Lastly, you should choose a fitting name for your Hero. And pick something good, you never know if that name will become legendary throughout the West!
GAME SET UP

To Set Up for an Adventure, complete the following steps in the order listed. This covers everything needed to start the basic Mission ‘A Fistful of Dark Stone’, and includes preparing the card decks, shuffling up the Exploration Tokens, placing the Mine Entrance, and getting the Heroes ready to go. Some later Missions have a slightly different Set Up as noted in their entry in the Adventure Book.

1) Number of Players/Heroes
   Decide on the number of Heroes that will be taking part in the Adventure. Usually this is one Hero per player, but sometimes it is fun to play a game controlling two Heroes each, for a fewer number of players.

2) Shuffle Card Decks
   Thoroughly shuffle all of the card decks and place them around the table as shown above.

3) Prepare Exploration Tokens
   Shuffle up all 12 Exploration Tokens and create a stack of them face down that players can draw from when they find a new room.

4) Ready Heroes
   Prepare each Hero that will be taking part. If these are new Heroes, make sure each of them is ready to go using the steps of Creating a New Hero, as detailed on page 7.
   One Hero gets the Old Lantern card in addition to his other Gear. The players may choose who will take it at the start of each Adventure.

5) Select Mission
   Select a Mission to play. For your first game, this will be the ‘Fistful of Dark Stone’ Mission described on the next page. For future games, you can choose a Mission from those listed in the Adventure Book. Note that some Missions have special Set Up instructions.

6) Prepare Depth Track
   Place the Depth Track where all players can see it, and position the Darkness marker on the Darkness Start space and the Hero Posse marker on the Mine Entrance space.

7) Place Mine Entrance
   Set the Mine Entrance Map Tile in the center of the table, where all players can reach it.

8) Place Heroes
   Lastly, each Hero model is placed on the Mine Entrance Map Tile in one of the six Starting Area spaces (as shown below).
The Starting Area on the Mine Entrance Map Tile includes the back row of four spaces as well as the two center spaces in the second row. The Heroes can be positioned in any of these six spaces, and should be placed in Initiative order, from highest to lowest.

### Difficulty Scaling

The number of Heroes taking part in an Adventure determines the difficulty and quantity of Enemies you will be facing. This is scaled in two ways - with Low, Med, and High Threat Decks for Enemies as well as with Revive Tokens to help fewer Heroes survive a little longer.

<table>
<thead>
<tr>
<th>Heroes</th>
<th>Scaling</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Low Threats, 2 Revive Tokens</td>
</tr>
<tr>
<td>2</td>
<td>Low Threats, 1 Revive Token</td>
</tr>
<tr>
<td>3</td>
<td>Med Threats, 1 Revive Token</td>
</tr>
<tr>
<td>4</td>
<td>Med Threats</td>
</tr>
<tr>
<td>5</td>
<td>High Threats, 1 Revive Token</td>
</tr>
<tr>
<td>6</td>
<td>High Threats</td>
</tr>
</tbody>
</table>

Both Threat Decks and Revive Tokens are covered in greater detail a little later.

### YOUR FIRST GAME

#### Basic Game

For your first game, a couple of the slightly more advanced elements will be left out to make it easier to get the hang of the things. Epic Threat boss Fights and Gates to Other Worlds will not be used. If the Encounter card Gateway to Another World is drawn, re-draw. Note, it may be tempting to just use everything right away, but there is enough to wrap your mind around with getting the basics down that it really is worth playing a game or two before diving into the deep end.

#### 'A Fistful of Dark Stone'

The introductory Mission is called ‘A Fistful of Dark Stone’. The Heroes have heard rumor of a vast deposit of Dark Stone buried down in one of the local mines and have come to find their fortune.

#### Mission Goals

To find the Dark Stone deposit, the Heroes must explore the mine and find 2 Exploration Tokens with Clue Icons on them. The first Clue lets them know they are on the right track, while the second Clue is the actual deposit itself!

#### The Objective Room

When the second Clue Icon is revealed, ignore any Encounter or Attack on the token, as well as any Door Icons. The Objective Room has no exits. Instead, the Heroes must draw a High Threat card (Red) to fight, as a large group of creatures has been attracted by the Dark Stone.

#### Reward

If all of the Enemies in the final room are defeated, the Heroes have completed the Mission and may collect as much of the Dark Stone as they can find. Each Hero gains 25 XP and D3 Dark Stone.

---

**NUMBER OF HEROES**

The number of Heroes taking part in an Adventure determines the difficulty and quantity of Enemies you will be facing. This is scaled in two ways - with Low, Med, and High Threat Decks for Enemies as well as with Revive Tokens to help fewer Heroes survive a little longer.

**Difficulty Scaling**

The chart below shows the Threat Deck that will be used as well as how many Revive Tokens the Heroes have available to them, based on the number of Heroes playing.
The Depth Track

The Depth Track represents the general path of the mine and tracks how deep the Hero Posse has journeyed and how close the Darkness is to escaping the mine and wreaking havoc on the countryside (resulting in failure for the Heroes). At the start of the game, the Hero Posse marker is placed at the Mine Entrance space on the far left of the track, while the Darkness marker is placed on the Darkness Start space on the far right.

During the course of the game, the Hero Posse marker moves down the track every time a new Map Tile is placed, as the Heroes travel deeper and deeper into the tunnels. The Darkness marker moves the opposite direction, up the track, as the Heroes fail to hold the Darkness at bay.

Stages of the Track

The Depth Track is broken into 3 Stages, and each Stage has a value printed at the bottom (7+, 8+, 9+). As the Hero Posse marker moves down the track, it passes through these different Stages, making it progressively harder for the Heroes to Hold Back the Darkness. Generally these Stages only matter for the current position of the Hero Posse marker, not the Darkness marker.

Holding Back the Darkness

At the start of each turn, the Hero with the Old Lantern must roll the Hold Back the Darkness test. The Hero rolls 2D6 and adds them together. If the number is equal to or greater than the value needed (listed at the bottom of the Stage that the Hero Posse marker is currently in), the Darkness has been held and the marker does not move this turn. If the roll is less than the value needed, the Darkness moves one step forward on the track (closer to the Mine Entrance). Grit may NOT be used to Re-roll a Hold Back the Darkness test.

Blood Spatter and Growing Dread Spaces on the Track

There are two special types of spaces on the Depth Track, Blood Spatter spaces and Growing Dread spaces.

Blood Spatter spaces - When the Darkness marker moves onto a Blood Spatter space, the Heroes must immediately draw a Darkness card as the Darkness has grown stronger.

Growing Dread spaces - When the Darkness marker moves onto a Growing Dread space, the Heroes must draw a Growing Dread card as the deadly nature of the Hero’s mission sinks in (see Growing Dread cards on page 14 for more on this later).

These special types of spaces on the Depth Track only matter for the Darkness marker, NOT the Hero Posse marker.

Depth Events

Any time the Hero with the Old Lantern rolls natural doubles for the Hold Back the Darkness test, a Depth Event has occurred! Even if the roll would normally have failed, instead of moving the Darkness marker, consult the Depth Event Chart to see what has happened (the Depth Event Chart can be found on one of the large reference cards).

There are 6 possible results on the chart, and the Event that has occurred is the one listed for the double number that was rolled (double 1s = 1 on the chart, double 2s = 2 on the chart, etc). This is usually something bad that has happened.
Each Game Turn has four steps that are completed in the following order:

1) Hold Back the Darkness
2) Models Activate in Initiative Order
3) Room Exploration
4) End of the Turn

Once all four steps are complete, a new Game Turn begins.

**Hold Back the Darkness**

As noted above, at the start of each turn, the Hero that
has the *Old Lantern* must roll the *Hold Back the Darkness* test
to prevent the Darkness marker from moving forward on the
Depth Track. This test occurs at the start of every turn (even
during a Fight), and the longer the Adventure goes, the harder
it is to hold the Darkness back.

**Models Activate in Initiative Order**

After the *Hold Back the Darkness* test is complete, each
model is Activated in order of Initiative, from highest to lowest.
A model’s *Initiative* can be found in the upper right corner of
their Hero Character Sheet or Enemy Record Sheet.

During most turns of the game, only Heroes will be on
the board as they explore the mines. During a Fight however,
Activations will often be intermixed between Heroes and
Enemies, based on their relative Initiative scores (more on
*Enemies* and *Fights* later).

**Room Exploration**

When the Heroes discover a new Room Map Tile, it has
an Exploration Token placed on it. Exploration Tokens like
this are revealed and resolved during the Room Exploration
step.

**End of the Turn**

After all models have been Activated and any new Rooms
have been explored, anything that occurs at the End of the
Turn happens. If there are multiple effects that trigger at the
End of the Turn, the Heroes may decide what order to do
them in.

---

**HERO ACTIVATION**

When a Hero is Activated, they may *Move* and then
either *Search* or make an *Attack*. Searching may NOT be
done during a Fight (as the Hero is a little busy).

**Hero Movement**

At the start of a Hero’s Activation, the first thing they
should do is to roll a single die for *Movement*. The Hero may
Move a number of spaces up to the amount rolled on the die.

Models have no facing and may move forward, back, side
to side, and even diagonally. Models may NOT move through
other models or through Walls, and may only move into valid
spaces on the board (it must be at least 50% of a full space, to
be considered a valid space).

The two half-spaces of an open-ended puzzle connection
on a Map Tile are considered to be Doorways and models
MAY move into these half-spaces. (*For players that do not like
Roll for Movement style games, an optional rule for Fixed Hero
Movement can be found on page 32*).

**Map Tile Puzzle Connections**

It is important to note that a Hero standing in a puzzle
connection space (between two Map Tiles) counts as being on
both of those Map Tiles. This can be important for Abilities
or effects that target every model on a specific Map Tile.
The Old Lantern and Voices in the Dark

The light from the Old Lantern is the only safety from the shadows. It illuminates the Map Tile that the Hero carrying it is currently on, as well as every adjacent Map Tile.

Any Hero starting their Activation on a Map Tile that is not within the Old Lantern's light (on the same or adjacent Map Tile as the Lantern) begins hearing 'Voices in the Dark', slowly driving them mad. That Hero immediately takes D6 Horror Hits (see Horror Hits and Sanity on page 15).

Searching

There are two different types of Searching a Hero can do at the end of their Movement, when not in a Fight - Scavenging or Looking through a Door. Note that you may do either of these things, not both.

Scavenging

Any Hero that ends their Move on a Map Tile that has not yet been successfully Scavenged may attempt to search the area for anything of value.

To Scavenge a Map Tile, roll 3 dice. If any of the dice roll a 6, you have successfully Scavenged the area and found something! Place a Scavenged marker on the Map Tile to show that it may not be Scavenged again, and draw one card from the Scavenge Deck for each 6 rolled.

As noted before, there is no discard pile for the Scavenge Deck. Each time a Hero needs to draw one or more Scavenge cards, shuffle the entire Scavenge Deck back together, and then draw any cards needed. Note that the Scavenge Deck is approximately 1/3 good, 1/3 bad, and 1/3 nothing, so Scavenging may not always end up being a benefit to your Hero (but it's usually fun to try).

A Hero may not Scavenge a Map Tile with an unrevealed Exploration Token on it and you may only Scavenge one Map Tile per turn. Any Map Tile may be Scavenged, whether it is a Room, or Passage, or even the Mine Entrance. End Caps and Gates are not considered full Map Tiles and may not be Scavenged.

Looking Through a Door

Open-ended puzzle connections on a Map Tile (not blocked off with an End Cap) are considered to be Doors. A Hero that ends their Move on one of these open-ended puzzle connection half-spaces may Search by Looking Through the Door, seeing into the next Map Tile.

Draw a Map Card and place the Map Tile shown as the next piece of the board, connected to the Door that the Hero is looking through. The green arrow on the card shows the 'entrance' to the new Map Tile that should be connected to the Door. If the new Map Tile cannot be placed because it would overlap an existing Map Tile (if it doesn't fit), discard it and draw a new Map Card.

Whenever a new Map Tile is placed, move the Hero Posse marker one step forward on the Depth Track, showing their progression deeper into the mine.

The Hero Posse marker will no longer move if it ever reaches the Darkness Start space of the Depth Track.

Note that Heroes may not look through Doors while there are Enemies on the board as Searching cannot be performed during a Fight.

Hero Attacks

A Hero is allowed to make one Attack during their Activation. This is covered later in the section on Fights.
EXPLORATION

Exploration is a big part of Shadows of Brimstone, and allows the Heroes an element of discovery as they pick their way through the dark halls and rooms of the underground mines.

Rooms and Exploration Tokens

There are two types of Map Tiles, Passages and Rooms. Passages are short pathways that simply connect different areas of the mine. Rooms, on the other hand, often hold Encounters or Enemies that the Heroes must face.

Whenever a Room Map Tile is placed, draw an Exploration Token without looking at it and place it face down on that Map Tile. Passages do not contain Exploration Tokens and are labeled as such on their individual Map Cards.

Once the Map Tile is placed, the Hero that looked through the Door will be standing in a puzzle connection space that is half on each Map Tile. As noted above, a Hero on a puzzle connection space like this is considered to be on BOTH Map Tiles. This means that during the Room Exploration step of the turn (after all Heroes have Activated), this Exploration Token will be revealed as there will be at least one Hero on the Map Tile with it.

Revealing Exploration Tokens

When an Exploration Token is revealed, flip it over so that all players can see what has been discovered! An Exploration Token has three important pieces of information – Door/Gate Icons (showing the Number of exits the Room has), Encounters or Attacks!, and if there are any Clues for the Heroes’ current Mission. There is also one particularly evil Exploration Token that adds a Growing Dread card to the stack (more on Growing Dread later).

Door/Gate Icons

At the top of the Exploration Token you will find one or more Door Icons. Each Icon represents an exit from the Room. So if there are 2 Door Icons on the Token, there will be 2 Random puzzle connection ‘Doors’ left open on the Room. On the Map Card for the Room, each potential exit is marked with a set of numbers to help randomly determine where the Doors are to be left open. For each Door Icon, roll a die and consult the Map Card to determine where that Door will be (roll again if there is already a Door there). Each puzzle connection exit that is not a Door should be closed off using an End Cap piece.

Note that some Exploration Tokens have a Gate Icon amongst the Door Icons. In the Basic Game, treat these as normal Doors in every way. In the Advanced Game, these Gate Icons represent a portal to an Other World that has opened and the Heroes can step through and continue to explore on the other side!

Encounters and Attack!

Exploration Tokens will always lead to Encounters or an Attack, both of which are covered a little later on.

Growing Dread Exploration Token

There is one Exploration Token that is particularly nasty, adding a Growing Dread card to the stack in addition to being an Encounter.

Clue Icons

Many of the Exploration Tokens have Clue Icons on them, representing important bits of information that help the Heroes on their Mission. Clue Icons have different meanings based on the particular Mission being played, as described in the Mission entry of the Adventure Book (some Missions do not use Clue Icons at all).

Finding the Objective

When the final Clue Icon needed is found (or whatever the particular Mission calls for is discovered), the Heroes have found their Objective!

This usually means that the Heroes ignore any Door Icons and Encounters/Attacks on the final Exploration Token (Note that the Growing Dread Exploration Token still adds a Growing Dread card). Instead, the Heroes have reached their goal and must face a final fight with a larger or meaner group of Enemies. In the Advanced Game, this comes in the form of an Epic Threat boss fight. In the introductory Mission, ‘A Fistful of Dark Stone’, it means fighting a High Threat card (Red) of Enemies.

WINNING AND LOSING

To Win a Mission, the Heroes must find the Objective and defeat any Enemies guarding it, as detailed in the particular Mission being played. For the basic ‘Fistful of Dark Stone’ Mission, the Heroes simply need to find the Objective room at the second Clue Icon and defeat a High Threat card of Enemies.

There are two main ways for the Heroes to Fail any Mission - if all of the Heroes are KO’d or if the Darkness Escapes the Mine.

All Heroes KO’d

If all of the Heroes are ever KO’d at the same time, the Mission immediately ends in failure. The Heroes are considered to escape, but must still roll for Injury/Madness.

Darkness Escapes

If the Darkness marker ever reaches the Mine Entrance space on the Depth Track, the Darkness escapes the mine and lays waste to the countryside. The Mission is failed and the Heroes must head home in defeat.

Running Away

Sometimes things look pretty grim. If all of the Heroes agree (at least all those that are not yet KO’d), at the start of any turn, the Hero Posse may elect to Flee from the Mine! This must be done before anything else in the turn happens. All of the Heroes (including those that are KO’d) escape the Mine and the Mission is considered to have been failed. Any Heroes that were KO’d still need to roll for Injury/Madness.
DARKNESS AND THE GROWING DREAD

**Darkness Cards**

Darkness cards are evil events that can cause Enemies to leap from the shadows, cave ins or supernatural events to occur, or allow the Darkness to steadily grow in power with cards that Remain in Play. Darkness cards are pretty much always bad for the Heroes.

There are two main ways for Darkness cards to be drawn during the game, whenever the Darkness marker reaches a Blood Spatter space on the Depth Track, and whenever a card’s game text instructs the players to do so (this is usually caused by Scavenge or Encounter cards).

When a Darkness card is drawn, it is read aloud to all players, starting with the card title, and then its game effect is resolved. Once complete, the card is discarded (unless it is marked as Remains in Play at the bottom of the card).

**Growing Dread Cards**

Growing Dread cards are dark and powerful events that can spell doom for the Heroes. Unlike Darkness cards, they are usually not played immediately when drawn. Instead, whenever a Growing Dread card is drawn, it is placed face down, without looking at it, in a stack near the Depth Track. Growing Dread cards are always added to the top of the stack, and can be fanned out a little so that players can see how many cards are in the stack. In this way, it creates an impending feeling of doom over the course of the game as more cards get added to the stack, with each being potentially deadly!

**Resolving Growing Dread**

When the Objective is found for the current Mission, but before any Threat cards are drawn or Enemies placed, the cards in the Growing Dread stack are revealed and resolved, one at a time, starting from the top of the stack.

**Canceling Growing Dread**

The Heroes are not helpless though. A Growing Dread card may be canceled if all of the Heroes in the Posse collectively use 1 Grit each (not including Heroes that are KO’d). This may be done while a Growing Dread card is still face down (cancel the top card of the stack), or once it has been revealed (before it takes effect).
There are many ways that a Hero can get hurt while fighting down in the mines (or even just while walking down the street in the Old West). Every Hero has Health, that measures their ability to take physical damage before being knocked out, and Sanity, that covers their ability to take mental strain before going mad. It is also possible to be corrupted by dark influences and even start to mutate from it.

### TYPES OF HITS

There are 3 types of Hits that a Hero can take - Hits, Horror Hits, and Corruption Hits.

**Hits**

Hits represent physical damage and cause Wounds if not prevented.

**Horror Hits**

Horror Hits represent mental strain and cause Sanity Damage if not prevented.

**Corruption Hits**

Corruption Hits represent dark influence and cause Corruption Points if not prevented.

### Defense and Willpower

Each Hero has Defense and Willpower marked on their character sheets. Both of these are saving rolls that allow the Hero to try and prevent incoming Hits from doing damage. Defense is used to prevent Hits while Willpower is used to prevent both Horror Hits and Corruption Hits.

Anytime a Hero takes one or more Hits, they may make a Defense roll against each, needing to roll equal to or higher than their Defense value to prevent the Hit. For example, if a Hero has a Defense of 4+ and takes 3 Hits, they would roll 3 Defense dice with each roll of 4, 5, or 6 preventing one of the incoming Hits. For each Defense roll that failed, the Hero would take damage from that Hit.

Willpower works exactly the same way, but is used for incoming Horror Hits and Corruption Hits instead.

### TYPES OF DAMAGE

**Wounds**

Wound markers are placed on a Hero’s Character Sheet (or Enemy) to show that they have taken damage against their Health. Each Hit that is not prevented does 1 Wound unless stated otherwise.

**Sanity Damage**

Sanity Damage markers are placed on a Hero’s Character Sheet to show that they have taken damage against their Sanity. Each Horror Hit that is not prevented does 1 Sanity Damage unless stated otherwise.

**Corruption Points**

Corruption Point markers are placed on a Hero’s Character Sheet to track how much Corruption they have gained. Each Corruption Hit that is not prevented does 1 Corruption Point.

### Armor and Spirit Armor

Armor helps to protect a Hero, even after their Defense or Willpower has failed them. Armor protects against Wounds while Spirit Armor protects against Sanity Damage. Neither one helps against Corruption though.

If a Hero has Armor/Spirit Armor, whenever they are about to take a number of Wounds/Sanity Damage, roll a D6 for each point of Damage they are about to take. For each die roll that is equal to or better than their Armor/Spirit Armor save, that point of damage is prevented. For example, if a Hero has Armor 5+ and takes two Hits past their Defense that do 3 Wounds each, the Hero rolls 6 dice. For every 5 or 6 rolled, a single one of the Wounds is prevented.

### Being KO’d

If a Hero ever has Wounds equal to their Health or Sanity Damage equal to their Sanity, they are immediately KO’d (Knocked Out), and no more Wounds/Sanity Damage will be applied (you cannot fall below 0). Remove the Hero model from the board and place a KO’d Hero marker in their space. Other models may freely move into and through a space with a KO’d Hero.

### Recovering

At the end of any turn when there are no Enemies on the board, a KO’d Hero may Recover. That Hero places their model back on the board, removing the KO’d Hero marker and pushing any model that was in their space to an adjacent space. They then roll once on the Injury Chart if their Health was reduced to 0 or the Madness Chart if their Sanity was reduced to 0. They also get to Heal 2D6 Wounds/Sanity (any mix). This Healing must bring their Health and Sanity back to at least 1 each.

If a Hero was reduced to 0 in both Health and Sanity at the same time, they must roll once on each Chart, but then get to Heal 2D6 Health and 2D6 Sanity.

### Revive Tokens

Revive Tokens are a special bonus that allow the Heroes to overcome otherwise dire situations. Usually Revive Tokens are held by the entire Posse as a whole rather than an individual Hero. Whenever a Hero is KO’d, if the Posse has one or more Revive Tokens, one Token is discarded and that Hero is restored to Full Health and Full Sanity, and they may Recover 1 Grit.

### Corruption and Mutation

Over time, Heroes can start to mutate from the Corruption they have taken. This is not used in the Basic Game, but is covered later in the Adventure Book.
Healing Health and Sanity

Whenever a Hero is allowed to Heal Health or Sanity Damage, they simply remove that number of damage markers from their character. When a Hero is allowed to Fully Heal Wounds or Sanity Damage, they get to remove all damage markers of that type from their character.

Healing Other Heroes

Any time a Hero Heals Wounds or Sanity Damage from another Hero (regardless of the method), they gain 5 XP for each Wound/Sanity healed.

Tokens like Whiskey and Bandages may be used to Heal other Heroes that are adjacent to you during a Fight, or even just on the same Map Tile while there are no Enemies on the board.

A RANDOM HERO

There are many things in the game that require you to determine a Random Hero. There are two simple ways to do this - use the Hero Tokens provided to draw one randomly, or simply roll a die.

A Hero Token for each Hero in this Core Set has been provided and these can be used to draw from without looking to determine a Random Hero.

Alternatively, it is often faster and easier to simply point to the different Heroes or Players and assign each a number set, then roll a die to see which is selected. For instance, if there are 3 Heroes you could say Hero A is 1-2, Hero B is 3-4, and Hero C is 5-6, then roll a D6. Keep in mind that the D8 also works great for this if there are 4 Heroes (1-2, 3-4, 5-6, 7-8).
ENCOUNTERS AND SKILL TESTS

Often times Heroes will come across aspects of the environment or situations that they need to try to overcome or deal with using their Skills. These are called Encounters and are most often found as part of an Exploration Token while investigating a room. Encounters can range from an underground waterfall to a ghostly apparition, or anything in between.

A HERO’S SKILLS

Every Hero has a set of six Skills that they use to interact with Encounters, overcome dangerous challenges, and that define the Hero’s mental and physical prowess.

### Agility
- Used for running, jumping, diving, and rolling, Agility is tested for challenges that require physical dexterity and stealth.

### Cunning
- The ability to understand technology, to outwit opponents, and to solve puzzles, Cunning is used for challenges that require the Hero to think their way past a problem.

### Spirit
- Used for interacting with the supernatural and the Void, Spirit determines how good the Hero is at overcoming demonic and ghostly Encounters as well as mental fortitude.

### Strength
- Physical brawn and brute force, Strength determines how good the Hero is at overpowering things and influences how far they can throw an item or how much weight they can carry.

### Lore
- Knowledge of myth and legend, Lore determines a Hero’s ability to decipher ancient languages and riddles as well as to tell stories and read occult tomes.

### Luck
- One cannot underestimate the power of being lucky. Of course, this has just as much to do with a Hero’s ability to minimize the effects of bad luck while capitalizing on any good fortune that comes their way.

### Who Takes the Test

Skill tests on an Encounter are marked with an icon to show who must take the test.

- **One Hero** - One Hero is chosen to make the Skill test. The Heroes must decide amongst themselves who will take it.
- **All Heroes** - Every Hero must make the Skill test.
- **One Random** - One Hero, chosen randomly, must make the Skill test.

### Making a Skill Test

To make a Skill test, the Hero rolls a number of dice equal to their value in that Skill. As long as any one of those dice is equal to or greater than the target number, the test is successfully passed.

For example, if a Hero needs to make a Lore 5+ test, they roll a number of dice equal to their Lore Skill. As long as one of those dice rolls a 5 or higher, the test is passed. If not, the test is failed.

### Skill Tests Outside of an Encounter

Sometimes Heroes will be called on to make a Skill test outside of an Encounter. This most often occurs between Missions, while Traveling, or while in a Town. These Skill tests work the same way, and it should be clear by the Event or card text who needs to make the test (usually the Hero that rolled the Event).

### Multiple Encounters

Sometimes an Exploration Token will call for multiple Encounters (For Example - Encounters x2). When this occurs, draw all of the needed Encounters and resolve them in any order you like. The only important thing to note is that any Enemies that Attack as a result of an Encounter will not be placed or start the Fight until all of the other non-Enemy aspects of the Encounters have been completed (so all Skill tests, etc. must be taken before Enemies are placed on the board). This can result in multiple Enemy Attacks at once.
GEAR AND ARTIFACTS

Gear and Artifact cards represent different items and pieces of equipment that a Hero can collect and use to help them on their adventures. Gear are more common items that can be found down in the mines and are often a bit more disposable. Artifacts are more rare and powerful items that usually have occult or magical origins, or come from another world altogether.

LIMITS

There are a few limiting factors that restrict how many Items that a Hero may carry and use at any given time.

Hands
Each Hero has 2 Hand slots that they can assign Items to each turn. This can be up to two different Single-Handed Items or one Double-Handed Item.

Single-Handed
This Item requires one of the Hero’s two Hand slots to have equipped during the turn.

Double-Handed
This Item requires both of the Hero’s Hand slots to have equipped during the turn.

At the start of every turn, each Hero may decide what Items they want to assign to their two Hand slots. Any other unassigned Items the Hero has that require one or two Hands to use, do not give the Hero any benefit from their card text.

Note that assigning Items to your Hand slots ‘at the start of the turn’ is usually only important during a Fight and it is assumed that the Hero can swap different Items into and out of their Hands when there are no Enemies on the board. You may still only ever use two Hand slots at any given time though.

Weight and Carrying Limit
Many Items have one or more small Weight icons on them to show that they are limited.

A Hero may only carry \( 5 + \text{their Strength} \) in Weight icons at any time.

Keyword Restrictions
Some Items have a red restriction bar that requires a Hero to have a certain Keyword to be able to use the Item. For example, if an Item says Law Only, the Hero must have the Keyword Law to use the Item.

Clothing Items
Occasionally an Item will have the Keyword Clothing followed by another Keyword that tells the Clothing Slot that the Item fills (Torso, Shoulders, Gloves, Coat, etc). These Items can be very powerful, but a Hero is limited to only a single Clothing Item for each unique Clothing Slot. So a Hero may only have one Clothing - Gloves equipped at any given time, as well as one Clothing - Coat and one Clothing - Hat, etc.

PERSONAL ITEMS

Personal Items are very powerful and characterful cards that are unique. Every new Hero character gets to draw one Personal Item to give them a special bonus as well as to thematically help fill in the backstory of the character. If a Gunslinger gets a Pocket Watch, perhaps he is always on time for his duels at high noon, or maybe it was his father’s Pocket Watch who was killed in a duel and now the Hero hunts the man who shot his father dead, seeking revenge!

Personal Items may never be traded, lost, sold, or discarded in any way. They help to define who the Hero is and the Hero will carry it till the day they die.
DARK STONE ICONS

Some Items have a Dark Stone Icon on them, usually in the upper left corner. This means that the Item is charged with Dark Stone energy in some way and counts as one Dark Stone when considering how much Dark Stone a Hero is carrying.

TRADING ITEMS

Sometimes a Hero will find an Item that they either don’t want or can’t use because of restrictions or the carrying limit. Heroes may give, trade, or even sell Items to other Heroes in the Posse (the Gold sell value of most Items is listed in the lower right corner). A Hero may transfer an Item (or Side Bag Token) to another Hero adjacent to them (or on the same Map Tile if there are no Enemies on the board). The only restriction is that the text or ability of an Item may not be used by two different Heroes in the same turn.

ITEM UPGRADES

Many Items have the capacity to be upgraded to give them extra benefits or abilities. These Items have one or more Upgrade Slots on them, shown at the bottom left of the card.

Upgrade Slots

An Item can have up to 3 Upgrade Slots on it, with each Slot represented as an empty circle. Upgrade Slots can be filled with an Upgrade Item or with a Forged Dark Stone Upgrade added to the Item by the Blacksmith in Town. These Upgrades will have one or more Slot Requirements (filled in black circles) to show how many Upgrade Slots they occupy when attached to an Item.

Attaching an Upgrade

As noted above, Upgrades come in two forms, either as a card that the Hero finds during an Adventure, or as Dark Stone that is forged directly onto the Item in Town.

An Upgrade card lists on it what it can be attached to as well as if it takes any resources to attach it to an Item (usually Dark Stone). When an Upgrade card is attached to an Item, it fills in a number of Upgrade Slots equal to its Slot Requirement and gives that Item the listed Bonus.

Upgrade cards attached to an Item can be removed at any time so that they can be attached to a different Item, sold, etc. The resources used to attach the Upgrade originally are lost.

Dark Stone that is Forged directly onto an Item in Town is a permanent change and may not be removed. It is now part of the Item. This is covered in more detail in the Visiting a Frontier Town section of the Adventure Book.

SIDE BAG

Each Hero has a Side Bag that is used to carry helpful Side Bag Tokens like Whiskey, Bandages, Dynamite, Tonic, etc. A Side Bag may hold up to 5 Tokens on it at a time and these can be any mixture of different Side Bag Tokens.

Side Bag Tokens

Side Bag Tokens are generally small ‘discard to use’ Items that a Hero may have more than one of. These are things like Whiskey or Bandages that are used to Heal yourself or another Hero, or Dynamite or Flash Powder used as an offensive weapon. A Side Bag Token can be identified by its parchment background and green title bar for the name of the Token.
Every Enemy Type is represented by a large Enemy Record Sheet that lists its stats and abilities. The Record Sheets are double-sided and have the normal (green) stats on one side, and the Brutal (red) stats on the other. The Brutal Enemy side is generally only used for groups of Heroes that are quite experienced and have been through many Adventures.

A) Enemy Type
This tells the name of the specific Enemy Type, such as Tentacles, Stranglers, or Hellbats.

B) Keyword
All Enemies have one or more Keywords that define the category they fall into (Demon, Beast, Void, etc). Generally these Keywords don’t have any built-in meaning, but are often referenced by other cards or abilities.

C) Size
The Size of the Enemy - Small, Medium, Large, Extra Large, or even Gargantuan.

D) Initiative
Just like Heroes, every Enemy has an Initiative that tells when they get to Activate in the turn order.

E) Abilities
Most Enemies have one or more Special Abilities that affect how they fight the Heroes.

F) Move
This is the number of spaces that the Enemy can move in a single Fight Round. Unlike Heroes, Enemies have a fixed move which makes them predictable and easier to move in large groups.

G) Escape
When a Hero is adjacent to the Enemy and wants to move away, they must first pass an Escape test using this Escape value (more on this a bit later).

H) ‘To Hit’ Values
Just like Heroes, Enemies have a To Hit value for Ranged Attacks and Melee Attacks.

I) Combat
The number of Combat dice the Enemy gets to roll against a Hero when making a Melee Attack.

J) Damage
The amount of Damage a Hero takes for each Enemy Combat Hit they fail to block with their Defense.

K) Defense
Unlike a Hero’s Defense (which is a roll to block Damage), an Enemy’s Defense is a fixed amount of Damage that is prevented from each Hit the Enemy would take.

L) Health
The number of Wounds that it takes to kill the Enemy.

M) XP Value
Every Enemy is worth XP to the Hero that kills it. Many larger or tougher Enemies give XP to a Hero just for Wounding it.

N) Elite Chart
Every Enemy Type has an Elite Chart of six extra Abilities that make it harder to defeat or more deadly in a Fight. When a group of Enemies is Elite, they get to roll on the Chart to see what extra Ability or Abilities that group of Enemies has.

Brutal Enemy Side
The back side of each Enemy Record Sheet has the Brutal version of that Enemy Type, displayed with a red background. These Brutal Enemies are generally only encountered by higher level Heroes that have played many Adventures. This is a way of scaling the Enemies that the Heroes have to fight over the course of a campaign.
FIGHTS

When the Heroes come across a group of Enemies, their exploration of the mine takes a back seat to fighting for their lives. These engagements are called Fights and cover the time from when Enemies appear until the last Enemy is defeated and the Fight is over. Fights make up the bulk of the action in the game and are an exciting way for the Heroes to get XP and Loot, though they can also be quite dangerous.

Attack!

The most common way for a Fight to begin is by finding an Attack Exploration Token while Exploring a Room. When an Attack occurs, the Heroes must draw a Threat card to see what has attacked them. Attacks can also be caused by other things as well, such as Darkness cards, Encounters, a Depth Event, etc.

Drawing Threat Cards

When a Fight begins, the first thing that the players need to do is find out what Enemies are actually attacking them. Usually, this means drawing a Threat card (though sometimes the Attack will call for a specific Type of Enemy as listed on the card or Event that caused the Attack in the first place).

To draw a Threat card, you simply take the top card from the Threat Deck of the appropriate Threat Level. This is based on the number of Heroes in the Posse. 1-2 Heroes use the Low Threats (green), 3-4 Heroes use the Med Threats (yellow), and 5-6 Heroes use the High Threats (red).

Attacks by Specific Enemies

When a card or event calls for an Attack by a specific Enemy Type, there is no need to draw a Threat card. Instead, the Type and number of Enemies is pre-set and listed in the text for that card/event.

Number of Enemy Models

Sometimes the number of Enemy models that will be taking part in the Fight is simply listed on the card. Many times, however, it will be a variable number of Enemies that the players must roll for, using the Peril Die.

The Peril Die is a special 6-sided die that has faces marked 3, 3, 4, 4, 5, and 6. This allows for a variable number of Enemies to show up, but never less than 3 at a time.

The Peril die is represented on cards and text as the symbol: ☞

Sometimes multiple Peril Dice will be used to find the number of Enemies for an Enemy Type that favors larger groups. For instance, Void Spiders often show up with up to 12 models at a time, and will frequently be listed on a Threat card as:

Void Spiders

In these cases, the Peril Die should be rolled twice and the two numbers added together to find the total.
Placing Enemies on the Board

Once you have determined what Types of Enemies are taking part in the Fight, and how many there are of each Type, it is time to place them on the board. Enemies from an Attack Exploration Token are placed on the Map Tile where the Token was revealed.

Enemies are placed on the board in reverse order of Initiative, from lowest to highest. So the slowest Enemies are always at the back of the group.

Starting with the lowest Initiative Enemy Type, models are placed on the Map Tile in every other space, forming a checkerboard pattern starting in the row farthest from the Map Tile Entrance, all the way to the back left (as shown in the diagram below). This includes any puzzle connection half-spaces.

Once all of an Enemy Type has been placed, continue on to the next lowest Initiative Enemy Type, until all Enemies have been placed on the board. If more than one Enemy Type shares the same Initiative, roll randomly between them for which is placed first.

Skip over any spaces that are not valid map spaces (less than 50% of a space) as well as any spaces that already have a model in it.

If there are more Enemy models to place than will fit in the checkerboard pattern on the Map Tile, return to the back row and begin placing models to fill in the spaces between.

If there are more models than will fit on the Map Tile, even with every space filled (which is rather rare), overflow models should be placed onto the Map Tile connected to the Entrance of the Room (most likely filling in around the Heroes) until they have all been placed.

Not Enough Models

If you are called on to place more Enemies of a particular Enemy Type than you have models available (for instance, you must place 4 Tentacles, but you only have 2 models as the rest are already on the board), place all of the models that you do have available, and ALL Enemies of that Type become Elite for the duration of this Fight.

Elite Enemies

Sometimes the Heroes will encounter a particularly nasty group of Enemies that are stronger, tougher, or more dangerous than normal. This is represented by Enemies having one or more Elite abilities.

When a group of Enemies is Elite, you must roll once on the Elite Chart at the bottom of the Enemy’s Record Sheet to see what extra ability they have. This Elite ability is applied to ALL Enemies of that Type for the duration of the Fight (so if you have 4 Stranglers on the board and 2 more show up that are Elite, all Stranglers on the board will get the Elite ability rolled). Place one of the numbered Elite markers on the Enemy Record Sheet to keep track of which Ability they have gained (1-6).

It is possible, especially as Heroes gain experience and go up in Hero Level, that a group of Enemies may have more than one Elite ability (double Elite or even triple Elite, etc). This just means that you must roll multiple times on the Elite Chart to see what abilities those Enemies have. If the same Elite ability is rolled more than once, Re-roll.

There is a bonus to fighting Elite Enemies, however, in that Elite Enemies are worth +5 XP for each Elite Ability they have.

AMBUSH ATTACKS

Sometimes an Enemy Attack will be listed as an Ambush Attack. This means that the Enemies have surprised the Heroes and are able to spring from the shadows to attack.

In an Ambush Attack, instead of being placed in the standard checkerboard pattern at the back of a room, Enemies are placed directly adjacent to the Heroes! If there are different Initiatives with the Enemies being placed in an Ambush Attack, the Enemies with the highest Initiative are placed first (so that the faster Enemies have priority on selecting targets).

Ambushing Enemies are placed adjacent to the Heroes and gain +2 Initiative during the first turn of the Fight.

If a new group of Enemies is placed by Ambush while a Fight is already going on, the new Enemies get the +2 Initiative during the first turn of the Fight they are involved in, as do any other Enemies already in the Fight that are the same specific Type as the Ambushers (Tentacles, HellBats, etc).

Enemy Placement

To determine exactly where the Ambushing Enemies are placed, start with the highest Initiative group of Enemies and place one model in any space adjacent to a Random Hero. That Enemy is said to be targeting that Hero to attack.
The next Enemy model is placed in any space adjacent to a Random Hero with the least number of Enemies of that Type targeting it and has at least one open space adjacent to it. In this way, the Enemies are placed to be evenly spread, targeting all of the different Heroes (though some Heroes will likely have more Enemies placed adjacent to them than others, due to limited open spaces). This process continues until all of the Ambushing Enemies are placed targeting Heroes.

Any Enemies that cannot be placed adjacent to a Hero, due to lack of open spaces, are placed as close to the Heroes as possible. These Enemies are not considered to be targeting any specific Hero, yet.

Enemies Appearing Mid-Turn
On rare occasion, a new group of Enemies will Ambush during the Models Activate in Initiative Order portion of the turn, usually by way of a Hero Scavenging and finding a Darkness card. When this happens, the Enemies are placed and the current turn immediately ends! A brand new turn begins, starting the Fight. Note that this is not the case if Enemies Ambush during the Hold Back the Darkness phase, as the Activating of models has not yet started.

TURNs DURING A FIGHT

Turns work much the same during a Fight as they do when Enemies are not on the board, the main difference is that the Enemies get to Activate as well as the Heroes. Also, the Heroes will actually be attacking during their Activation, instead of just moving and exploring.

Initiative Order
Models still Activate in Initiative order, from highest to lowest, but this now includes the Enemies as well as the Heroes.

Enemies get to Activate first if their Initiative is tied with a Hero.

All Enemies of a specific Type (such as HellBats or Stranglers) are Activated at the same time, as a group. If more than one Enemy Type have the same Initiative, roll randomly between them each turn to see which gets to Activate first.

When a Type of Enemies is Activated, they will get to Move and Attack just like a Hero would; they just get to do so as a group. This is covered in detail below.

FEAR, TERROR, AND UNSPEAKABLE TERROR

Some especially scary creatures will cause Horror Hits on Heroes just for being near them! These Enemies have an Ability called Fear (x), Terror (x), or Unspeakable Terror (x), and are defined on the Enemy’s Record Sheet.

Fear does Horror Hits to adjacent Heroes, Terror does Horror Hits to Heroes that are on the same Map Tile as it, and Unspeakable Terror does Horror Hits if the Hero is on the same or even adjacent Map Tile to the creature. The (x) is the number of Horror Hits done.

These abilities can be very effective at reducing a Hero’s Sanity, as they stack up for each Enemy that causes them, and they do the Horror Hits every turn as long as the Enemy is alive.

HERO MOVEMENT IN A FIGHT

Heroes move normally during a Fight, with one exception. If a Hero ever has an Enemy in an adjacent space to them, the Hero must first try to Escape before starting or continuing to move.

Escape Tests
Every Enemy has an Escape value listed on their Record Sheet. When a Hero is adjacent to that Enemy and wants to move, they must first roll an Escape Test.

To make an Escape Test, roll a D6. If the result is equal to or higher than the Enemy’s Escape value, the test is passed and the Hero may move for the rest of this turn ignoring any adjacent Enemies that have that Escape value or lower.

For example, if a Hero is adjacent to an Enemy with a 4+ Escape value, they must roll a 4, 5, or 6 on a D6 to be able to move. Once they do, however, for the rest of the turn, that Hero may move past any adjacent Enemy with an Escape value of 4+, 3+, or 2+.

If the Hero becomes adjacent to another Enemy with a higher Escape value (≥ 5+ or 6+ in the previous example), they must stop their move and make a new Escape Test with the higher difficulty to keep going.

No Searching or Room Exploration
As noted in the section on Hero Movement, Searching and Room Exploration may not be done during a Fight (this includes Scavenging as the Heroes are a little busy).
HERO ATTACKS

After a Hero has moved, they are allowed to make one Attack. This can be a Melee Attack using their basic Combat or a Ranged Attack using a Ranged Weapon like a Pistol or Shotgun.

Melee Attacks
Every Hero has a built-in Melee Attack available to them in the form of throwing punches. Melee Attacks use the Hero’s basic Combat value, which is usually 2, as well as any bonuses they may have from Items or Abilities. A Melee Attack may only target adjacent Enemies, so you will need to get up close to use it.

Combat is the number of dice the Hero gets to roll when making a Melee Attack.

A Hero can use any number of Items and Abilities they have to add bonuses to their Melee Attack as long as they observe all restrictions (such as using no more than 2 Single-Handed Items or 1 Double-Handed Item, etc).

Ranged Attacks
Ranged Attacks are provided by a Ranged Weapon the Hero has, such as a Pistol, Rifle, or Shotgun. These Items are listed as having a Range as well as a number of Shots.

Range is the number of spaces away that an Enemy can be and still be hit by the Attack.

Shots is the number of dice the Hero gets to roll for a Ranged Attack made with that Weapon.

Roll ‘To Hit’
Every Hero has two different ‘To Hit’ values listed on their Character Sheet - ‘Melee To Hit’ and ‘Ranged To Hit’. Melee To Hit is used when making a Melee Attack and Ranged To Hit is used when making a Ranged Attack.

The Hero rolls their dice and each roll that is equal to or greater than their appropriate ‘To Hit’ value counts as one Hit. Any dice that rolled a 6 counts as a Critical Hit and gets a special bonus when rolling for Damage.

Assigning Hits
After all of the Hero’s dice have been rolled and the number of Hits determined, the Hero is allowed to assign those Hits, one at a time, to any Enemies within Range.

Hits may always be assigned and resolved one at a time, or in groups. It is your choice.

For Melee Attacks, Hits may only be assigned to adjacent Enemies.

For Ranged Attacks, Hits may be assigned to any Enemies within the Range of the Weapon and within the Hero’s Line of Sight. However...

If there are Enemies adjacent to you, you must always assign and resolve Ranged Hits against them first.

If your initial Hits kill all Enemies adjacent to you, you may then begin assigning subsequent Ranged Hits to other Enemies.

Line of Sight for Ranged Attacks
To be able to see an Enemy and assign Ranged Attack Hits to them, you must be able to draw a straight line from the center of the Hero’s space to the center of the target’s space without it crossing a Wall (the thick black border of the Map Tiles). Only Walls block Line of Sight; other models have no effect on it.

Line of Sight Example - To see an Enemy, the Hero must be able to draw a straight line to it, from the center of his space to the center of the target’s space, without that line crossing a black Wall.
Rolling for Damage

Each successful Hit that the Hero scored on an Enemy does D6 Damage to that Enemy. These Damage rolls are made separately for each Hit (though all Damage rolls for Hits assigned to a single target may be rolled together so that the Hero may use 1 Grit to Re-roll any number of them).

Enemy Defense

Enemy Defense works a little bit differently than Hero Defense. Instead of being a saving roll that the Enemy gets (which would be a little cumbersome), an Enemy’s Defense value is simply subtracted from the Damage that each incoming Hero Hit would do. The remaining Damage after Defense is the number of Wounds actually done to that Enemy.

So, for example, if a Hero scores 2 Hits and rolls a 3 and a 5 for Damage, an Enemy with Defense 3 would take a total of 2 Wounds (Damage 3 - Defense 3 = 0 and Damage 5 - Defense 3 = 2).

Critical Hits

As noted above, any Hero To Hit rolls of 6 count as Critical Hits! These special Hits allow you to ignore an Enemy’s Defense and apply all of the Damage that Hit does directly to the Enemy’s Health. This can be very powerful, allowing you to wound or kill an Enemy, even if it has a fairly high Defense value.

Wounding and Killing an Enemy

When a Hero does one or more Wounds to an Enemy, Wound markers should be placed by that Enemy model to track how much damage it has taken. These Wounds stay on that Enemy until it is killed.

An Enemy is killed as soon as it has a number of Wounds equal to its Health. When an Enemy is killed, it is immediately removed from the board and the Hero that caused the last Wound gains XP.

Collecting XP

Every Enemy has an XP value listed on its Record Sheet, just below its Health. For smaller Enemies, this XP value is the amount of XP gained by a Hero that kills it (causes the last Wound which removes it from the board).

For larger Enemies, this XP value works a bit differently and is marked as a number of XP ‘+5 Each’. For these larger Enemies Heroes gain XP just for Wounding them. This allows all of the Heroes to get XP for doing their part in helping to take down a larger creature.

XP is gained individually for each Hit that does one or more Wounds to the Enemy. The amount of XP gained is equal to the base XP value as well as an additional +5 XP for each Wound done.

For example, if a Hero scores 2 Hits on a large Enemy with ‘10XP +5 Each’ as its XP value, and those Hits do 2 Wounds and 4 Wounds respectively, the Hero would gain a total of 30 XP (10 +5 +5 +5 +5 = 30 XP).

As noted earlier, Elite Enemies are worth +5 XP per Elite ability they have. This is only added to the base XP value for larger Enemies that give XP per Wound.

Free Attacks

Some cards and abilities give a Hero a Free Attack. Free Attacks are made in addition to the Hero’s normal Attack for the turn. A Free Attack may be used during the Hero’s Activation, either before or after making a normal Attack.

No more than 1 Free Attack may be made by a Hero in a single turn.

Throwing Dynamite

A Hero may throw a Dynamite Token as a Ranged Attack. The Range of the throw is up to the Hero’s Strength +3 and it may be thrown at ANY space in Range as long as the Hero has Line of Sight to that space (even if Enemies are adjacent to the Hero).

Roll once To Hit. If successful, the Dynamite lands in the targeted space and explodes. If the To Hit roll was missed, the Dynamite will instead Bounce D3 times in Random Directions before exploding. The chart for direction of Bounce can be found on the Dynamite Reference card and in the Reference Summary at the back of this Rulebook.

When the Dynamite explodes, it does D6 Wounds, ignoring Defense, to each model in the same and adjacent spaces to it. Roll the Damage for each model separately.
ENEMY MOVEMENT

When a Type of Enemy is Activated, they get to Move and then Attack as a group.

Activating an Enemy Type
As discussed above, all of the Enemies of a specific Type are Activated together when their Initiative comes up in the turn order. When Activated, the first thing that the Enemies do is to Target Heroes and move towards them to Attack.

Targeting Heroes and Movement
Though all of the Enemies of a specific Type are Activated together, they choose their targets and move one at a time, starting with the Enemy model that is closest to the Heroes. If more than one are at equal distance to the nearest Hero, you may choose the order that they are moved in.

The first Enemy model targets a Random Hero that they can reach - within their Move distance (printed on the Enemy Record Sheet) and with a clear path to get there. That Enemy is said to be targeting the selected Hero to Attack and is moved as far as it can be to a space adjacent to that Hero. This will usually have the Enemy move to the far side of the Hero, getting in behind them and making way for other Enemies.

It is often a good idea to have the Enemy models physically turned to face the Hero they are targeting so that it is very clear where each Enemy is placing its Attacks.

Then, the next closest Enemy model will target a different Random Hero with the least number of Enemies of that Type targeting it and is within reach. In this way, the Enemies are moved to be evenly spread, targeting all of the different Heroes (though some Heroes will likely have more Enemies reach them than others, due to paths being blocked or not enough movement). This process continues until all of the Activating Enemies have been moved.

Any Enemies that cannot reach a Hero will move as far as they can toward the nearest Hero. These Enemies are not considered to be targeting any specific Hero yet.

Staying on Target
Once an Enemy targets a Hero, it will continue to target and attack that Hero until they are KO’d or until the Hero is no longer adjacent. Enemies do NOT change target based on who is attacking them.

Choosing a new Target
If the Hero being targeted by an Enemy moves away or is KO’d, the Enemy will select a new Hero using the same process described above.

In this way, if a Hero is feeling overwhelmed, they can always try to Escape and run away in the hopes that the Enemies targeting them will choose a new and different target during their next Activation.

Large Enemies
Large Size Enemies have a special built-in ability to brush aside and push past smaller Enemies to reach the Heroes. Whenever a Large Size Enemy (or bigger) is selecting a target Hero, they may move through other Enemies that are Medium or Small Size that would normally block their path.

As the Large Enemy moves, it may enter a Medium/Small Enemy’s space, displacing that smaller Enemy into the space that the Large Enemy just left. In this way, the Large Enemy swaps places with the smaller one to push past it and get closer to the Hero.

Large Enemies may displace any number of Small/Medium Enemies like this during their move to reach their target Hero. They may not, however, displace other Large Size Enemies or Heroes to reach their target.
**Enemy Attacks**

Once all of the currently Activating Enemies have targeted a Hero and been moved, it is time for them each to Attack!

**Rolling ‘To Hit’**

Rolling ‘To Hit’ for Enemy Attacks works just like it does for a Hero Attack. The only difference is that Enemies DO NOT get Critical Hits on rolls of 6. Some Enemies do, however, have special Abilities which might be triggered by ‘To Hit’ rolls of 6 (such as Tentacles with their Smash Ability).

Each Enemy rolls a number of dice equal to their Combat value against the Hero it is targeting. Every die that successfully rolls equal to or greater than the Enemy’s ‘To Hit’ value causes one Hit on the Hero.

Note that as the game itself is playing the Enemies, it is up to other players to actually roll the dice for the Enemies’ Attacks. A player should not roll the Enemy Attacks on their own Hero (that would be bad form). Instead, one of the other players should roll the dice for the Enemy Attacks against you. It is usually good to simply always roll the Enemy Attacks against the player to your left, or to just exchange (“I’ll roll the Enemy Attacks on you and you roll the Attacks against me”).

**Hero Defense Rolls**

For each Hit a Hero takes, they must make a Defense roll to attempt to block it. Generally a Hero wants to roll all of their Defense rolls from the current Enemy Attacks together so that if they need to, they can use a Grit to Re-roll all of the dice that just failed.

**Taking Damage**

For each Hit that the Hero failed to block with their Defense, they take a number of Wounds equal to the Enemy’s Damage value.

---

**Completing the Fight**

Once all of the Enemies on the board have been defeated, the Fight immediately ends and it is time for the Heroes to Catch Your Breath, Recover from being KO’d, and collect Loot for the Fight. This ends the current turn as well as the Fight itself.

**Catch Your Breath**

Each Hero is allowed to Catch Your Breath at the end of every Fight, Healing D3 Wounds/Sanity (any mix).

If the Fight ended before the Hero got to Activate (or take any Actions), they instead get to Heal D6 Wounds/Sanity (any mix) or Recover 1 Grit. This is an extra bonus for each Hero that didn’t get an Activation in the last Fight round.

**Recovering From Being KO’d**

Any Hero that was KO’d during the Fight now gets to Recover, placing their figure back on the board and Healing 2D6 Wounds/Sanity (any mix). They do, however, also need to roll once on the Injury Chart or Madness Chart (Injury if their Health was reduced to 0, Madness if their Sanity was reduced to 0). This represents any long-lasting effects of being KO’d.

In the event that both a Hero’s Health and Sanity were reduced to 0 at the same time, they must roll an Injury and a Madness, but they are allowed to Heal 2D6 Health and 2D6 Sanity.

**Drawing Loot Cards**

After a Fight, the Heroes get Loot for their hard work.

At the end of a Fight, every Hero is allowed to draw one Loot card for each Threat card that added Enemies to the Fight (to a max of 3 Loot Cards each).

This also includes each instance of Enemies that were added to the Fight by other means, such as a Darkness or Encounter card, or the Depth Event chart.

The Loot Deck has no discard pile and should be fully shuffled before the Heroes draw one or more cards from it. All of the Heroes draw from the Loot Deck at the same time so if a group of 4 Heroes get the max of 3 Loot cards each, that would use all 12 cards in the Loot Deck.

**Dark Stone and Gold**

Dark Stone and Gold are the two currencies of the game and are the most common reward that can be found in the Loot Deck.

Gold represents a mixture of coins and paper money as well as nuggets of gold (hence the gold coin and dollar sign as the icon). The Gold prices listed on Items are meant to reflect the abstract nature of having a generalized ‘money’ currency and the over-inflated economy of the frontier boomtowns in the areas around Brimstone where equipment is in short supply.

Gold is really only used when keeping Heroes from game to game and can be spent when visiting Frontier Towns between Adventures. Dark Stone is mainly used for the Campaign game as well, for forging at the Blacksmith, though several Items and Artifacts are fueled by Dark Stone even during an Adventure.
The following are Advanced Rules that are meant to be integrated into the game after you are comfortable with the basics and want to add in the rest of the game features. These mainly include the Epic Threat boss enemies, the Campaign system of keeping Heroes from game to game, and stepping through gateways to Other Worlds!

**EPIC THREATS**

Epic Threat cards represent much larger and deadlier boss Enemies that are rare to come across and hard to defeat. These are most often used only for final Objective Room fights as noted in the details of each individual Mission.

**1 or 2 Heroes**

With Hero Posse of only 1 or 2 Heroes, anytime an Epic Threat would be needed, draw a High Threat card instead. Fighting the massive boss Enemies often found on Epic Threats can be overly difficult for only 1 or 2 characters to handle. Of course, if you are ambitious, you can use Epic Threats anyway, but you have been warned!

**Movement**

When moving, once again the Enemy uses a single one of its four spaces as an anchor space for counting movement and distance to a Hero.

Just like Large Size Enemies, an Extra Large Enemy may brush aside and push past any Small or Medium Size Enemies in its way, swapping spaces with them as it goes (it just usually moves them two spaces back, instead of one, to account for its larger base size).

**Overflowing the Board**

In some cases, the only way for an Extra Large Enemy to reach a Hero is to smash through the walls to get to them. This is called Overflowing the Board and allows the Enemy to hang off the edge of the Map Tiles to fit into a smaller space than their base would normally allow. The Enemy must keep at least half of its base on the board at the end of its move.

**Area Effect and Extra Large Bases**

Even though an Extra Large Enemy takes up multiple spaces on the board, they are only ever affected once by weapons and abilities that target an area (like Dynamite for instance). Even if the explosion would cover two or more spaces that the Enemy base is in, the Enemy is still only affected by it once.

**Tough**

Most Extra Large boss Enemies have the Tough ability meaning that they are Immune to Critical Hits. For them, Critical Hits from a Hero just count as normal Hits.

---

**EXTRA LARGE ENEMIES**

Some Enemies are so large and menacing that they take up multiple spaces on the game board! These are usually boss creatures and are part of an Epic Threat Fight.

**Extra Large Base Size**

Extra Large Size Enemies actually take up four spaces on the board in a 2x2 square. When one of these Enemies is being placed on the board, it uses a single one of its four spaces as the anchor space for placement and should be positioned so that the rest of the base is placed into spaces that are viable and have no other models in them.

**Extra Large Enemy Movement Example** - This Extra Large Enemy could randomly select to target either of the two Heroes shown. If targeting Hero B, the Enemy moves as far as it can, while keeping its full base on the board at the end of its move. If targeting Hero A, it will stop in front of him so as to keep its full base on the board.

**Extra Large Enemy Overflow Example** - In this example, the Extra Large Enemy randomly selects Hero B to target. The only way to reach him is to Overflow the board and smash through the wall leaving half of its base off the board. It moves as far as it can to reach him and ends in a space that had Enemy 1, displacing that existing Enemy out of the way.
**ENEMY RANGED ATTACKS**

Some Enemies have Abilities that give them a Ranged Attack to battle the Heroes with.

**Targeting Heroes and Movement**

Enemies with a Ranged Attack will target a Hero as normal, however they will use the Range of their Ranged Attack, rather than their Move value, to choose their targets. This means that they will target a Random Hero based on the Range of their Attack and Line of Sight rather than on their Move and a clear Path, like a normal Enemy would. If there are one or more Heroes adjacent to the Enemy, it will attempt to target those Heroes first.

Another aspect of this is that Enemies with a Ranged Attack will re-target each turn instead of staying with a single target that they keep attacking.

These Enemies will generally not Move unless there are no viable Hero targets for them to Attack. When this is the case, the Enemy will move toward the nearest Hero until they are in Range and Line of Sight, then select a target.

**Ranged or Melee**

If an Enemy has both a Ranged Attack and a Combat value, it will only make a Melee Attack if there is an adjacent Hero to it (the Enemy will not move to make a Melee Attack). When choosing a target each turn, the Enemy will first select a Random target from any adjacent Heroes, and if there are none, it will then select a target at Range.

**HELPING A KO’D HERO**

When a Hero gets KO’d during a Fight, it can often be a slippery slope to defeat for the rest of the posse. There are some ways though that the other Heroes can try to help the fallen get back into the fight!

**Recovering a KO’d Hero mid-Fight**

A Hero that is adjacent to a KO’d Hero marker may give up their Attack to help that Hero Recover. This may only be done as long as there are no Enemies on the same Map Tile as the KO’d Hero marker. The KO’d Hero immediately rolls on the Injury/Madness chart as appropriate and Heals their 2D6 Wounds/Sanity (any mix) as normal. Their figure is placed back onto the board, but they do not get an Activation in the same turn that they Recover (they are still a bit dazed).

**Dragging a KO’d Hero**

Any Hero in the same or adjacent space to a KO’d Hero marker may drag that Hero with them while they move. To do so, simply use 1 extra movement point for each space you want to move while dragging the KO’d Hero (so 2 move per space).

The KO’d Hero marker will be moved along with you as you go and left in your space (if you started dragging them while in the space with the marker), or the last space you moved from if you were adjacent to them. This can be useful for getting a KO’d Hero to the safety of a Map Tile with no Enemies so that you can try to help them Recover.

**PLAYERS**

Shadows of Brimstone can be used for Solo Adventures or can even be expanded to support up to 5 or 6 Heroes.

**A 5 or 6 Hero Game**

A 5 or 6 player game can be achieved by getting a second Core Set or additional Hero Classes to play as. This works the same as all of the rules detailed so far, and the difficulty scaling is already listed for the higher player count on page 9. It is not recommended that you try playing with more than 6 Heroes as the difficulty scaling does not work very well with that many Heroes, and the game will start to drag with so many players.

**Solo Game**

The game can easily be played Solo and is fun whether controlling a single Hero or a full posse of your own! One Hero makes for an exciting, albeit deadly, game. This method makes use of the Revive Tokens to keep you going and can be looked at almost as extra lives. Does your Hero have what it takes to go it alone?

**Multiple Heroes of the Same Class**

One thing that can be very fun is to play a Hero Posse with more than one of the same Hero Class, or even a Posse where all of the Heroes are the same Hero Class. Having a Posse of Bandidos journey down into the mines on a quest for fortune or a group of Lawmen setting out for some frontier justice can create a lot of cool gameplay and story moments!

**CAMPAIGN GAME**

Creating new Heroes and playing a single Adventure can be a lot of fun, but keeping your Hero from game to game and watching them grow is an extremely rewarding process that allows the story and game world to really shine. This also allows you to Travel between Adventures and visit Frontier Towns as well as go up in Hero Levels and get new Abilities and gear as you go!

Different Missions, Leveling Up Heroes, Traveling, and Visiting Frontier Towns can all be found in the Adventure Book.

**CORRUPTION AND MUTATION**

Fighting nightmarish creatures and working around Dark Stone can be hazardous not just to your health and sanity, but to your soul! As Heroes gain Corruption Points, they will begin to mutate and change over time. This is covered in detail in the Adventure Book.

**Dark Stone Corruption**

At the end of an Adventure, each Hero must roll a D6 for every Dark Stone they are carrying (including Items with a Dark Stone Icon). For every roll of 1, 2, or 3, that Hero takes 1 Corruption Hit from the dark influence of the Dark Stone. Willpower saves may be used to prevent these Corruption Hits as normal.
GATES TO ANOTHER WORLD

Finding a Gateway to another World can be a very exciting and dangerous event. This usually happens through an Exploration Token with a Gate Icon or an Encounter that adds a Gate to a Room.

Gate Icons
Gate Icons on Exploration Tokens work just like Door Icons, but instead of leaving the puzzle connection open, a Gate End Cap is placed there.

Gate End Caps
Gate End Caps work very similar to Doors. Rather than standing in one of the puzzle connection half-spaces to look through the Doorway though, the Hero stands in the half-and-half connection space adjacent to the blue swirling Gate (half on the Map Tile and Half on the Gate End Cap) to look through the Gate.

Looking Through a Gate
When a Hero looks through a Gate, they are seeing through the portal and into another World, across space and time...maybe even into another dimension! The Hero must draw a World Card to see where the Gate leads.

Drawing a World Card
Each World Card represents a different World that is available to the Heroes to explore. Each Core Set comes with the Mines and one Other World. While in the Mines, the Mines World Card should be face up near the Depth Track to show that it is a World that Heroes are currently in. When a Hero looks through an unexplored Gate, they must draw a World Card randomly from those not currently in play. Because this Core Set only includes one Other World, this will always be the World that you find on the other side of a Gate.

Dual Wielding

Normally a Hero is only allowed to make a Ranged Attack with a single Ranged Weapon. However, a Hero that has two Single-Handed Ranged Weapons may fire both as a single Ranged Attack! This is called Dual Wielding.

There is a penalty to this though, in that the Attack may NOT get Critical Hits for either of the two weapons (rolls of 6 just count as normal Hits).

It is usually a good idea to roll two different colors of dice for a Dual Wielding Attack like this, where one color of die is used for the Shots from each weapon. That way you can keep track of how many Hits each weapon scored. This may matter as far as the Range and any bonuses the different weapons may have.

Other World Map Tiles
The Other World Map Tiles are printed on the reverse side of the Mine Map Tiles. There is also a full Map Deck for the Other World that represents each of the Map Tiles for that World (just like the Mine Map Deck).

Once you have determined the Other World that is through the Gate, you should draw a Map Card for that World and put it into play. Then place a Gate End Cap for that World attached to the Entrance of the newly placed Other World Map Tile. These two Gate End Caps are connected.

Break in the Map
To represent the distance through time and space that the Gate spans, there is a break in the map whenever the Heroes find a Gate. One side of the map ends in a Gate End Cap and the other side begins with a connected Gate End Cap. These two sections of the board do not need to touch and can be positioned anywhere on the table relative to one another.

The two spaces on one Gate End Cap are considered to be adjacent to the two spaces on the other Gate End Cap.
Tile with a Gate End Cap, the light from the Lantern will cover Adjacent Map Tiles start taking shots. World, but you can move up to the Gate and look through to cannot stand back and just shoot across the room into another End Cap itself looking directly through. This means that you traced through the Gate unless you are standing on the Gate takes place in the same World as that Hero.

Movement Through a Gate
Because the two spaces on each side of the Gate are considered to be adjacent to each other, models may move through the Gate just as though the spaces on either side were directly next to one another.

Movement Through a Gate
Because the two spaces on each side of the Gate are considered to be adjacent, a model may be placed adjacent to the other side of the Gate. This creates a visual break in the board, but remains connected by way of the Gate itself. In this example, spaces A and B are considered to be fully adjacent to spaces C and D.

Movement Through a Gate
Because the two spaces on each side of the Gate are considered to be adjacent, a model may be placed adjacent to the other side of the Gate. This creates a visual break in the board, but remains connected by way of the Gate itself. In this example, spaces A and B are considered to be fully adjacent to spaces C and D.

Movement Through a Gate
Because the two spaces on each side of the Gate are considered to be adjacent, a model may be placed adjacent to the other side of the Gate. This creates a visual break in the board, but remains connected by way of the Gate itself. In this example, spaces A and B are considered to be fully adjacent to spaces C and D.

Gate Placement Example - When a Gate is found, a Gate End Cap is attached to the Map Tile and an Other World Gate End Cap is placed to represent the other side of the Gate. This creates a visual break in the board, but remains connected by way of the Gate itself. In this example, spaces A and B are considered to be fully adjacent to spaces C and D.

Gate Placement Example - When a Gate is found, a Gate End Cap is attached to the Map Tile and an Other World Gate End Cap is placed to represent the other side of the Gate. This creates a visual break in the board, but remains connected by way of the Gate itself. In this example, spaces A and B are considered to be fully adjacent to spaces C and D.

Gate Placement Example - When a Gate is found, a Gate End Cap is attached to the Map Tile and an Other World Gate End Cap is placed to represent the other side of the Gate. This creates a visual break in the board, but remains connected by way of the Gate itself. In this example, spaces A and B are considered to be fully adjacent to spaces C and D.

Exploration Tokens on the Other Side
If the Other World Map Tile placed on the far side of the Gate is a Room, it will get an Exploration Token placed on it as normal. Unlike finding a Room in the World you are already in though, the Hero is simply looking through the Gate, not actually standing on the new Map Tile (he is standing on his own side of the Map Tile/Gate End Cap, not on the new Map Tile/Gate End Cap).

Because of this, the Exploration Token will not be revealed until a Room Exploration phase in which a Hero is actually on the Map Tile with it. So a Hero will actually have to step through the Gate to Explore the Room on the other side.

Movement Through a Gate
Because the two spaces on each side of the Gate are considered to be adjacent, models may move through the Gate just as though the spaces on either side were directly next to one another.

Seeing/Attacking Through a Gate
This works the same way for Attacking. Because the spaces on either side are considered adjacent, a model may attack through the Gate. So if you are standing on one side of the Gate, you may target Enemies on the other side.

Line of Sight for Ranged Attacks, however, may not be traced through the Gate unless you are standing on the Gate End Cap itself looking directly through. This means that you cannot stand back and just shoot across the room into another World, but you can move up to the Gate and look through to start taking shots.

Adjacent Map Tiles
If the Hero with the Old Lantern is standing on a Map Tile with a Gate End Cap, the light from the Lantern will cover the Map Tile on the other side of the Gate, as it is considered to be an adjacent Map Tile. This works the same for other effects that reach to adjacent Map Tiles such as Unspeakable Terror, etc.

An Enemy with Terror will affect Heroes in the two spaces directly on the other side of that Gate, even though they are not technically on the same Map Tile.

Encounters, Depth Events, and Ambush Attacks with Two Worlds
When an Encounter is drawn, only the Heroes that are currently in the same World as that Encounter are affected by its game text and involved with taking the tests on that card.

Similarly, when an Ambush Attack occurs, the Enemies will only be placed adjacent to and target Heroes that are in the same World as the Ambush. If the Ambush was caused by something that is not located in one World or another (such as a Darkness card), select a Random Hero and the Ambush takes place in the same World as that Hero.

Depth Events are always assumed to take place in the same World that the Old Lantern is in and will only affect Heroes that are in that World with it. Note that each Other World has its own unique Depth Event Chart to be used when the Hero with the Old Lantern is in that World.

OTHER WORLDS

Each Other World is intended to have a distinct look and feel to it as the Heroes explore and find new, wondrous, and sometimes deadly things there. This is achieved through having a unique set of Map Tiles as well as Global Effects for anyone in that World. There is also a small set of card decks that are unique to that World. Each Core Set focuses on all of the details of one of these Other Worlds (as described in the Adventure Book). More Other Worlds can be found in other Shadows of Brimstone Core Sets and Expansions.

World Cards and Global Effects
Every World (including the Mines) is represented by a World Card. This World Card lists the Name of the World as well as any Global Effects that apply to any Heroes currently in that World.

Map Cards, Encounters, Artifacts, and Other World Threats
Each Other World has unique card decks for Map Cards, Encounters, Artifacts, and Other World Threats. While in that Other World, these card decks should be used in place of the normal Mine versions of these decks. When a card would be drawn from one of these decks, simply use the Other World version of that deck instead. This is a relatively obvious switch for most of these decks, with the exception of the Other World Threats.

Other World Threat cards represent Enemies that are unique to the alien world you are in (though the Wandering Enemy card represents other creatures finding their way through a portal into that world). Unlike the normal Threat Decks that are split into Low, Med, and High Threats, there is only one Other World Threat Deck and each card in it lists the result for Low (Green), Med (Yellow), and High (Red) Threats. Normal Epic Threats are used for Other Worlds as well, but any additional Threat cards they have you draw should be from the Other World Threat cards.
Loot Cards for Gear and Artifacts

You will likely have noticed that the Loot cards that allow a Hero to draw a Gear card or an Artifact card have a special note on them. While in an Other World, these card effects are actually reversed, so the Loot card that normally lets you draw a Gear will give you an Artifact and vice versa. This is because there are twice as many cards that let the Hero draw Gear as there are for drawing an Artifact and is meant to represent that Artifacts are more common in a strange alien environment than finding a piece of Gear would be.

OPTIONAL RULES

This section covers Optional Rules that can be added to the game as long as all of the players agree before the game begins. These Optional Rules are all independent of one another and should each be considered on an individual basis. The rules for Fixed Hero Move and Hard-Core Mode are not recommended, but are made available for players that want them.

FIXED HERO MOVE

As an option for players that do not like the idea of rolling for movement each turn, they may use the Fixed Hero Movement Optional Rule. With this rule, all Heroes are allowed to move 4 spaces each turn (plus any bonuses or negatives for Items, Abilities, or Injuries/Mutations they may have).

As many aspects of the game are based on your Movement roll each turn, it is still necessary to roll a die at the start of each of your Hero’s Activations. This roll becomes the Roll For Grit (as that is the most frequent use of the move roll other than actual movement). Any rule or game element that refers to a Heroes move roll now uses the Roll For Grit instead. The Roll For Grit each turn is mandatory, even if your Hero is already at Max Grit.

ADVANCED ENCOUNTERS

Every Unique Room Map Tile has a specific theme to it, and there is a matching Encounter card in the Encounter Deck that shares that theme. At the bottom of each Map Card that represents a Unique Room is a red band that lists the specific Encounter associated with that room.

When using the Advanced Encounters Optional Rule, any time a Unique Room is Explored, the listed Advanced Encounter is added to that Exploration. Search the Encounter Deck (and discard Pile if needed) to find the listed Encounter card (shuffle the deck afterwards). This is in addition to any other Encounters or Attacks listed on the Exploration Token. Also, Advanced Encounters like this cannot be canceled or re-drawn.
For players that want a truly Hard Core experience, you may play **Hard-Core Mode**. In Hard-Core Mode, any time a Hero would be KO’d they are instead killed unless they Recover before the start of the next turn.

This is a very unforgiving play style and will likely lead to one or more players having to sit out the remainder of the game while the rest of the group keeps adventuring (not generally very fun). It is also especially dangerous for higher level Heroes, as one bad situation can kill the character you have been playing for months. Ouch!

For a slightly softer version of Hard-Core Mode, you can use the above, but allow Heroes to still be **Resurrected** at the Church in Town.

---

**HARD-CORE MODE**

As more Enemy Types become available and players start making their own Missions, one fun way to create a Themed Adventure is to tailor-make your Threat Decks to only include cards with certain Enemy Types. In this way, you could make a Mine that is overrun with nothing but **Hungry Dead Zombies** or perhaps have a theme of only **Void** creatures that have spilled out of a portal and are pouring out of the mines.

This can be done with just a single Core Set, but really opens up once you have more Enemy Types available to you. It is also very simple to do as the Threat Decks are all card based and can easily be Themed or shuffled back together at the start of each Adventure.

---

**DANGEROUS DYNAMITE**

Dynamite can be a very powerful tool to take out groups of Enemies or do some damage against high Defense targets. Thematically though, Dynamite is a dangerous thing to just be carrying around in your Side Bag with you, as it is notoriously unstable.

To represent this extra element of danger, you may elect to use the **Dangerous Dynamite** Optional Rule. Any time a Hero takes 10 or more Wounds from a single source, they must roll a D6 for each Dynamite Token they have in their Side Bag. For each roll of 1 or 2, that Token immediately explodes, centered on the Hero’s space.

Note that this only includes Dynamite Tokens in a Hero’s Side Bag, so if they are carrying Dynamite in a different way (such as a **Dynamite Satchel**), that Dynamite is considered to be safely stored and does not need to be rolled for.

---

**THEMED THREAT DECKS**

---

**BELOW THE DARKNESS**

One way to make the game more deadly is to use the **Below the Darkness** Optional Rule. Whenever the Darkness marker passes the Hero Posse marker on the Depth Track (positioned on a higher numbered step than the Hero Posse marker), from that point forward, all Enemies get a free Elite Ability as the Darkness has grown ever stronger!

### Reference Summary

#### Difficulty Scaling

<table>
<thead>
<tr>
<th>Heroes</th>
<th>Scaling</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Low Threats, 2 Revive Tokens</td>
</tr>
<tr>
<td>2</td>
<td>Low Threats, 1 Revive Token</td>
</tr>
<tr>
<td>3</td>
<td>Med Threats, 1 Revive Token</td>
</tr>
<tr>
<td>4</td>
<td>Med Threats</td>
</tr>
<tr>
<td>5</td>
<td>High Threats, 1 Revive Token</td>
</tr>
<tr>
<td>6</td>
<td>High Threats</td>
</tr>
</tbody>
</table>

#### Dynamite Bounce

If the To Hit roll misses, Dynamite will bounce D3 times.

For each bounce, roll a D8 for direction and move the Dynamite 1 space.

If Dynamite would move into a wall, instead cancel that bounce.

#### Using Grit

A Hero may use a Grit to do one of three things:
- Use 1 Grit to Re-roll any number of dice that you just rolled.
- Use 1 Grit to add an extra D6 to your Movement.
- Use Grit to activate a Special Ability or Item that requires it.

#### Side Bag Tokens

- **Bandages**: Discard this Token to Heal D6 Wounds from yourself or an adjacent Hero.
- **Whiskey**: Discard this Token to Heal D6 Sanity Damage from yourself or an adjacent Hero.
- **Dynamite**: Discard this Token to throw it as a Ranged Attack. Range: Strength+3, Does D6 Wounds, ignoring Defense, to each model in the same and adjacent spaces.
- **Herbs**: Discard this Token to Heal 2D6 Wounds from yourself or an adjacent Hero.
- **Tonic**: Discard this Token to Recover 1 Grit.
- **Flash**: Discard this Token to make all Enemies -2 Initiative until the end of the turn.

#### The Game Turn

1) Hold Back the Darkness
2) Models Activate in Initiative Order
3) Room Exploration
4) End of the Turn

#### Icons

- **Peril Die**
- **Weight**
- **Dark Stone Item**
- **Single-Handed**
- **Double-Handed**
- **Clue Icon**
- **Door Icon**
- **Gate Icon**
- **Upgrade Slots**
- **Upgrade Slot Requirement**

#### Skill Tests - Who Takes the Test

- **All Heroes**
- **Choose One Hero**
- **One Random Hero**
