

# SANTY ANNO

## Santy Anno

3 to 8 players / 10 years and above / 30 min  
Translation : Benoit Löscher

This is an exciting pirate game created by Alain Orban and produced by the "Belgians with Sombreros" of Repos Production.

### HISTORICAL BACKGROUND

You are one of the notorious pirates of the SANTY ANNO, the terrifying three-master that makes the Caribbean seas insecure. After a long night drinking rum and partying, you have forgotten where your ship is and, even worse, who is your captain!

To resolve this, actually very common problem in a pirate's life, the pirate's guild has initiated a new tradition: the first 3 on board will respectively become captain and first mates. The ones arriving too late will be demoted to ship's boys and spend the rest of the trip cleaning the deck!

Will you be fast and smart enough to avoid being spending the rest of your time with brush and bucket instead of sword and gun?

### 1 - AIM OF THE GAME

Avoid to be demoted and get a maximum of ducats. At the end of the game (5 rounds) the player with the most money is nominated captain and wins. The next 2 are his first mates. The

others lose and have to pay for the next round... and to clean the table and glasses!

At 3 or 4 players, there will be only one winner: the captain.

### 2 - MATERIAL

- 58 cards (37 Basic and 15 Expert boarding cards, 6 Event cards)
- Coins representing ducats (values from 1 to 5)
- These rules
- 8 ships
- 8 pirate tiles, 8 scuttles and 8 pirate frames
- 1 "harbour" board

### 3 - SET UP

- Put 8 chairs around a table and take a seat.
- Put the 8 ships randomly in front of the chairs (the numbers should not be in sequence). The 8 ships must be placed on the table even if you are less than 8 players!
- Put the harbour on the centre of the table.

- Each player takes a pirate, his scuttle and the corresponding rectangular tile. He puts the tile

on the left hand side of the ship. The 8 frames, the remaining tiles and scuttles should be put back into the box.

- Sort the ducats by their values.

- Put the 15 boarding cards with a star (expert level), the 6 event cards (with a telescope on their back) in the box, they are not use in the base game.

The other cards are shuffled and piled up face down beside the harbour.

The most experienced player is called the **Bosun**. He will reveal the cards and double check the moves of the pirates.

## THE GAME

You play in 5 rounds. At the beginning of each round, a series of boarding cards are revealed. All the pirates play at the same time and must try to sit down as fast as possible in front of their target ship that is established by the boarding cards.

The first 5 players that get to their ship (not necessarily the Santy Anno) get ducats: the first one 5, the second 4 and so on. So you not only have to sit in front of the right ship, but you also need to be amongst the firsts!

### 1 - DESCRIPTION OF THE SHIPS

The ships are all different but do have common elements. It is important to take a closer look to them since all boarding cards are based on these elements and their characteristics.

Each ship has 4 elements that allow her to be identified amongst the others:

- the crow's-nest
- the sails
- the hull
- the name plate

Each element has a given colour (yellow, red, blue or green).

Each ship has 4 different colours, none of

her elements having the same colour. It is also important to notice that only 2 elements do have the same colour amongst the 8 ships. For example, only 2 ships do have red sails, only 2 a red crow's-nest, etc.

The ships also have a name and a number from 1 to 8.

Finally, in one of the 4 corners, you can see Coco, our beloved parrot.

### 2 - A ROUND

A round is divided in 4 phases.

#### PHASE 1: "CAST OFF"

##### REVEAL THE BOARDING CARDS

All the players have to stand behind their chair and take their scuttle in their hand.

The **Bosun** reveals the boarding cards face up in line beside the harbour. In the first round, 5 cards are revealed. The cards will be read in the order indicated by the arrow on the harbour. To avoid other players to start thinking, the cards will be placed in the reverse order of reading, from the last to the first. When the latter is revealed he shouts "Cast off!!" to start phase 2.

#### PHASE 2: FIND YOUR SHIP

Each player looks at the boarding cards and mentally moves his pirate from ship to ship to the final destination that is defined by the complete series of moves described by the cards. You have to apply these cards one after the other following the order defined by the arrow on the harbour.

Note that the move defined by a card applies to the ship on which the pirate currently is (not necessarily the starting ship). Ships do never move, and it is forbidden to move one's pirate during this phase!

As soon as a player thinks to know his final destination (target ship), he runs around the table to sit in front of the ship and as soon as he

sits, he puts his scuttle face down on the harbour. If there is already a scuttle, he puts his on top of it to create a stack. If a player put his scuttle before sitting, he has to take it back, sit down and put it back on the stack.

Two or more persons can sit on the same chair; the second one has to sit on the previous one's lap and so forth. Er... Make sure that the chairs are robust enough before starting the game... if you have some doubts, better remain standing behind the person seated and put your hands on his shoulders.

The players can choose the way they run around the table.

If all the players but one have arrived, they count down from 5 to 0. Phase 2 ends at 0. If the last player is not sitting by then, he has to place his scuttle on the left hand side of the harbour. He won't get any money in this round and has to sit onto a chair that remains free.

### PHASE 3 : RESOLVE THE BOARDING CARDS

Now that everybody is sitting, you have to check if the pirates are on the correct ship. This has to be done very carefully to avoid mistakes. Let the **Bosun** lead the manoeuvre.

We advise you for your first games to resolve the boarding in sequence one pirate after the other. Let the **Bosun** move the tiles to avoid any mistakes.

This will also let you understand the procedure. To indicate that a pirate has completed all of his moves, put the tile on the target ship.

Once you know the game better and all the players understand the moves, you can apply the move defined by a card to all the pirates at once.

The **Bosun** takes the first card and applies the corresponding moves. To avoid any mistake, the order of the colours and letters in which the moves are done are shown on the harbour board. Once a pirate has moved, he is placed on the ship. If a pirate has not to be moved, put him on his current ship. Once the move defined by the cards has been applied to all the pirates, put them all on the left

hand side of their ship and discard the card. Take the next one in sequence and apply the related moves. Do all the moves as requested by the **Bosun**.

Pay attention while applying this method since pirates can cross each other. After each move put the pirate on the ship, so you can easily identify which ones have been moved.

### PHASE 4 : SPLIT THE LOOT

The **Bosun** takes the pile of scuttles and turns it upside down to see the first one who arrived. If this one is on the right place, i.e. if he sits in front of the right target ship, the **Bosun** puts the scuttle on the right hand side of the harbour. If the player is not on the right place, the scuttle is put on the left hand side. The **Bosun** checks the other scuttles the same way. The pirates that are on the left place are put in arrival order.

Then the **Bosun** distributes the money to the people who are correctly seated: a 5 ducats coin on the first scuttle, a 4 ducats coin to the second and so on till the 5<sup>th</sup> one who receives a 1 ducat coin. If there are less than 5 people correctly seated, the remaining coins are put back into the box. Finally, each player takes his scuttle back as well as the coin that might be on it.

Each player has to hide his loot in a safe and secret place... such as your pocket for example.

### 3 - END OF THE ROUND AND NEXT ONES

Each player stands up behind the chair where his pirate currently is – if it is not the case yet – and all used boarding cards are discarded. A new round begins.

The **Bosun** reveal one more cards per round: 6 cards in the second round, 7 in the third, 8 in the fourth and finally 9 in the fifth one.

Special rule for the last two rounds (8 and 9 cards).

The players have to run once around the table before sitting down. Therefore, the scuttle is left beside the starting ship. It will be taken once the player has completed his round. Note that the player can then change direction to go to his target seat.

### 4 - END OF THE GAME

The game ends after splitting the loot in the 5<sup>th</sup> round. The player having the most ducats becomes the captain and is the winner. The second and third become his first mates. The others loose and have to pay for the next round... and to clean the table and glasses!

Don't forget to return the coins you might have left in your pockets!

In case of a tie, the one with the most 5 ducats coins wins. If there is still a tie, it is the one with the most 4 ducats coins and so forth. And in the very seldom case that people have the exact same coins, we advise you to do an arm-wrestling match.

### BOARDING CARDS

There are 4 types of boarding cards in the base game: element, colour, name and number. They define the pirates' moves. Reminder: the ships do not move, and the boarding card is only applicable to the ship the pirate is currently located (not necessarily the starting ship).

### 1 - THE ELEMENT CARDS

The element cards (crow's-nest, sails, hull and name plate) tell you that the pirate has to move to the other ship where the shown element is of the same

colour as of the one of his current ship: the target ship is the one having the shown element of the same colour.

E.g.: "The Brain" who is on a ship with a red hull ("Sahara"). He moves to the other ship with a red hull, the "Viper". If there is a pirate on the target ship "Viper", they swap their place.

There are 2 types of element card: The white ones and the one with a colour struck out.

The white cards tell you that the boarding is applicable to all 4 colours.

The cards with a colour struck out tell you that the boarding applies to all the colours but the one shown on the card.

E.g.: all the pirates but the ones on a ship with yellow hull move to the ship with hull of the same colour as their ship.

To simplify the boarding resolution during phase 3, please process in the colour order as indicated on the harbour.

## 2 - THE COLOUR CARDS

The colour cards do not show any element. You have to look which of the elements of your current ship has the same colour as the card. The pirate moves to the ship having

this element of the same colour of the card.

E.g.: The yellow card is to be applied. "El Belgo" is on the "Paradise", a ship having yellow sails. He now has to move to the other ship having yellow sails, the "Royal".

To ease the resolution at phase 3, perform the moves from top to bottom: crow's-nest, sails, hull and name plate.

## 3 - THE NAME CARDS

The name cards tell you to move to the ship that has a name starting with the same letter as the current one.

There are 2 types of name cards: the ones with a letter struck out, and the ones with 4 letters.

The cards with 4 letters tells you that the move is applicable to all letters

The cards with a letter struck out, tells you that the move is applied to all letters but the one shown on the card.

E.g.: The card with a P struck out is to be applied. "Beauty" is on the "Profundis". She does not move.

"Edward" who is on the "Royal" moves to the "Revenge"

To ease the resolution during phase 3, please follow the order of the letters as shown on the harbour (P, R, S and V).

## 4 - THE NUMBER CARDS

To resolve this card, you must add the number of the current ship to one of the ones shown on the card. The result is your target ship. Take the number (positive or negative) of the card that gives you a result between 1 and 8.

E.g.: For the card +3/-5, the pirates on ship 1, 2, 3, 4 and 5 will add 3, the ones on ship 6, 7, 8 subtract 5.

## EXPERT BOARDING

Once you are familiarised with the base game, we invite you to play with the expert cards: remove randomly 10 of the base boarding cards and add the expert cards to the remaining boarding cards.

### 1 - THE HELM CARDS

The helm cards tell you that the pirates have to move from ship to ship in the direction shown on the card. The cards are numbered from 1 to 4 in both directions. When resolving this card in phase 3, the **Bosun** asks that each player takes the pirate that is in front of him and ask that everybody moves it together at his pace.

### 2 - THE DOUBLE CARDS

The double cards show 2 ship elements. To find the target ship, you'll have to look at the colour of these 2 elements on your current ship and swap them to find the corresponding ship.

E.g.: the crow's-nest/hull card is to be applied. You are on the "Paradise"; this ship has a red crow's-nest and a blue hull. Your target ship will be the one with a blue crow's-nest and a red hull, the "Viper".

### 3 - THE COCO CARDS

The Coco cards tell you that the pirate has to move to the ship having Coco in the same corner as your current ship. Again to ease the card resolution in phase 3, make the moves in the order shown on the harbour.

## EVENT CARDS

The event cards have a special back with a telescope. There are 6 cards representing 4 different events.

The event cards should be introduced once you are familiar with the base and expert games. They make the pirate's life even spicier.

The event cards are shuffled and piled up face down next to the boarding cards.

When the **Bosun** reveals the boarding cards, he leaves the first boarding card face down and inserts the event card - also face down - between the 3<sup>rd</sup> and 4<sup>th</sup> boarding.

The **Bosun** then returns simultaneously both cards (the first boarding and the event cards) shouting "cast off!".

The rest of the round remains the same with the exception of the event occurring between the 3<sup>rd</sup> and 4<sup>th</sup> move.

## 1 - WHIRLWIND

A whirlwind increases the confusion in your quest for the right ship.

The boarding card before and the one after the whirlwind are swapped.

The pirates must therefore apply the 4<sup>th</sup> boarding card before the 3<sup>rd</sup> one.

## 2 - SEASICK

Well, there must have been something odd with the food or the rum tonight, you become seasick.

All the boarding cards after this event are impacted. After each boarding card that follows this event, the pirate has to move to the next ship in the direction indicated by the card. In fact, it is as if they applied the helm of value 1 after each boarding, even if they did not move. Note: there is one card for each direction.

## 3 - THE BERMUDA TRIANGLE

Even in the quietest harbour the Bermuda triangle has its effects.

The boarding cards that follows this events must be read in reverse order.

So the 1<sup>st</sup>, 2<sup>nd</sup> and 3<sup>rd</sup> boarding cards are applied, than the last, last but one, and so forth until the 4<sup>th</sup> boarding.

## 4 - RUM OR THE ULTIMATE CHALLENGE

"A good pirate can find his ship backwards" said Black Beard before falling into the sea and drowning.

During the second phase you have to walk backwards to get to your seat.

As an ultimate challenge run once backwards around the table before getting to your seat (as you would do in the 4<sup>th</sup> and 5<sup>th</sup> rounds).

## PLAYING WITHOUT MOVING AROUND THE TABLE

If there is no room to run around the table, you can play without moving.

Each of the players receives a frame for his pirate and keeps it in his hand.

The gaming rules are the same, but instead of running around the table to sit on a chair, you first put your frame under the ship that you think is your target ship and then you put your scuttle on the harbour.

Once all the players have put their frame and scuttle, the round continues with phase 3 and 4. If the frame is on the same ship as the pirate tile, this indicates that you arrived on the right target ship.
